**Caitlin Feehan, RiverRenew Program Director**

# Chief Executive Officer's Message

---

## To the Board of Directors, Alexandria Renew Enterprises:

Equitable access to clean, healthy water resources is essential for a community's well-being and economic development. Investment in wastewater and water infrastructure creates local jobs, supports local businesses, and improves public health. These are critical success factors as the Nation cautiously builds back from the COVID-19 pandemic.

However, as the community slowly reopens, AlexRenew recognizes that the pandemic has caused disproportionate economic strain on some members of the community. The Fiscal Year 2022 proposed budget and rate structure minimize increases to residential and commercial customers, while maintaining a fiscally sustainable utility and building for the future. The proposed Operating Budget totals \$28.3 million, representing a zero year-over-year increase, a decision AlexRenew made to minimize needed rate increases due to the impacts of COVID-19 on the community.

The proposed Capital Improvement Program budget totals \$185.6 million. This is a significant increase relative to last year's budget and reflects the increased investment needed to implement the RiverRenew program. The budget includes planned spending increases as work on RiverRenew accelerates in the upcoming year and expenditures on this Program peak in 2023. AlexRenew recently issued two new sewer revenue bonds to fund this construction spending and forecasts that steady annual rate increases will be required in order to repay the bonds.

The RiverRenew program is the City's largest infrastructure project to date. RiverRenew is in response to a 2017 legislative mandate by the Commonwealth of Virginia to fix four combined sewer outfalls in the older parts of Alexandria. The Program features a new network of deep tunnels and sewers that will connect to the outfalls, which currently pollute the City's waterways on rainy days, to capture millions of gallons of sewage for treatment at AlexRenew. By law, RiverRenew must be completed by July 1, 2025. To date, the team has met all major milestones that were set out at program inception in order to meet this deadline.

Looking to the future, AlexRenew will continue to balance the significant financial obligations of the RiverRenew program with the expenditures required to keep its existing wastewater infrastructure well-maintained and capable of supporting increased demands in the future. This balance is reflected in the budget and investments AlexRenew is planning for Fiscal Year 2022.

AlexRenew continues to improve local waterways and help make the environment a cleaner, healthier place, and looks forward to continuing the strong community partnerships that help keep local waterways clean. Thank you for your passionate support of AlexRenew's clean water mission.

**Karen Pallansch, Chief Executive Officer  
Alexandria Renew Enterprises**

# Understanding the Budget

AlexRenew's budget is a financial instrument, crafted within a financial, legal, policy, regulatory and capital investment framework to ensure financial sustainability, support public health, and provide a clean, healthy water environment for the community. The budget is developed in a manner that ensures AlexRenew has the financial resources to efficiently construct, operate, and maintain a water resource recovery facility, intercepting system, and pump stations that comply with state and federal law.

Current expenses and capital outlays are estimates based on experience and judgment related to cost trends in labor, materials, and services required to operate and maintain AlexRenew's facilities. AlexRenew has no discretion with respect to the level of service it must provide to meet its regulatory requirements, and no discretionary programs within its assigned scope of activity. The primary purpose of the budget is to ensure AlexRenew maintains its mandated level of service, satisfies the requirements of the Master Indenture of Trust ("Indenture"), and achieves the objectives of AlexRenew's Financial Policies.

AlexRenew has only two major sources of revenue to fund all expenditures: wastewater treatment charges paid by City of Alexandria customers, and the reimbursement of a portion of expenses paid by Fairfax County. Fairfax County makes payments to AlexRenew under an amended and restated Service Agreement dated October 1, 1998 ("Fairfax County Agreement"). In accordance with the Fairfax County Agreement, Fairfax County pays a percentage of operations and maintenance expenses based upon sewer flow volume. Fairfax County also contributes to the Improvement, Renewal and Replacement Fund (IRR) and Capital Improvement Program (CIP), at predetermined levels, to allow for the upgrade and replacement of capital assets as they depreciate, and the acquisition of new assets associated with regulatory compliance.

## What is AlexRenew's Strategic Plan?

The AlexRenew Strategic Plan cascades from the AlexRenew's 2040 Vision, shown on the following page. The 2040 Vision was originally developed in 2012 by AlexRenew's citizen-led Board and was most recently updated in 2018. In support of the 2040 Vision, Strategic Plan sets organizational objectives and drives the organization's budget. The current Strategic Plan identifies twelve priority objectives, listed below.

### Strategic Outcome 1: Operational Excellence

- 1.1 Reliably and consistently produce quality products from our community's wastewater
- 1.2 Become a leading digital community in the water sector

### Strategic Outcome 2: Public Engagement and Trust

- 2.1 Lead regional efforts to keep our watershed healthy and thriving
- 2.2 Deepen understanding of One Water, the Value of Water, AlexRenew and RiverRenew and related issues
- 2.3 Support and advance AlexRenew and water sector defining research that promotes triple bottom line sustainability

### Strategic Outcome 3: Watershed Stewardship

- 3.1 Infrastructure partnerships increase AlexRenew reputation and long term effectiveness as a community anchor
- 3.2 Promote AlexRenew's innovative spirit through a network of partners and cross sector collaborators

### Strategic Outcome 4: Adaptive Culture

- 4.1 Unleash employee support for AlexRenew's vision, values, outcomes and public service mission
- 4.2 Continually enhance the safety, security and wellness of our people
- 4.3 Equip our employees with the knowledge, skills and certifications to execute their role in providing a resilient organization and community

### Strategic Outcome 5: Financial Stewardship

- 5.1 Deliver cost effective and balanced wastewater services to our community and contractual partners
- 5.2 Aggressively seek alternative financing sources and seek best debt financing options

## 2040 Vision

**By 2040, AlexRenew has effectively partnered with all watershed stakeholders to:**

Enable local citizens the opportunity to embrace the best use of water resources and establish a **personal connection** with **local waterways**.

Create a **healthy environment** and improve **quality of life** through the exceptional reclamation of used water resources.

**Sustainably** manage water as a **single resource** through the entire water cycle.

Maximize use of multiple financial options to continue **fiscal stability**.

### Strategic Outcomes

**Operational Excellence:** 100% compliance with all imposed mandates through continuous improvement efforts documented by EMS.

**Public Engagement and Trust:** Transparency in all public interactions.

**Watershed Stewardship:** Sustainability and resiliency integrated through effective partnerships.

**Adaptive Culture:** All employees continue to be fully rounded water professionals.

**Effective Financial Stewardship:** Provide clean water cost effectively

# Understanding the Budget

---

## How is AlexRenew's Budget Organized?

AlexRenew builds its budget from documents that provide legal or internal policy direction. These documents include a Master Indenture of Trust (Indenture) and related financing documents; the Fairfax County Service Agreement; a Service Agreement with the City of Alexandria; a service agreement between AlexRenew and Arlington County (Arlington County Agreement); and Financial Policies adopted by the AlexRenew Board of Directors.

The Indenture is a legal agreement that mandates how AlexRenew will collect and use its revenues for operations, maintenance and capital expenses. This document requires that wastewater treatment charges collected from City of Alexandria sewer system customers be deposited in a Revenue Fund. This document also requires operating expense payments are made by Fairfax County to AlexRenew, for its reserved capacity in the sewer system, also be deposited in the Revenue Fund. The amount due to AlexRenew from Fairfax County is established in the aforementioned Fairfax County Service Agreement.

The Fairfax County Service Agreement further directs the amount and timing for monies to be paid by the County to AlexRenew for improvements and repairs to the sewer system infrastructure and investments in major capital projects.

The Arlington County Service Agreement is like the Fairfax County Service Agreement. This legal document establishes the amount and timing for monies paid by AlexRenew to Arlington County for agreed upon capacity in the Arlington County sewer system by the northwestern quadrant of the City of Alexandria.

AlexRenew's budget is also structure to comply with the Financial Policies adopted by the Board of Directors to maintain a combined 120 days of reserves in the Operating Fund and General Reserve sub-Fund, to ensure that revenues available to pay debt service are at least equal to 1.50 times the amount of debt service due in any fiscal year, and the fund at least 15% of the Capital Improvement Program from cash and reserves (PAYGO).

# Budget Timeline

AlexRenew utilizes a fiscal year cycle ending June 30. The FY 2022 budget will encompass the 12-month period from **July 1, 2021 – June 30, 2022**. AlexRenew typically develops the budget during the prior fiscal year before it undergoes review by the Board of Directors and then the public. The FY 2022 budget cycle also includes the adoption of new rates and charges for FY 2022 and FY 2023.

<b>Month</b>	<b>Customer</b>	<b>Board of Directors</b>	<b>Staff</b>
<b>August - February</b>			<b>Proposed Budget Development</b> Departments prepare budget proposals; CEO develops a balanced proposed budget.
<b>March-April</b>		<b>Budget Review</b> Board of Directors request additional information on specific budget issues from staff.	The CEO presents the proposed budget and rates to the Board of Directors.
<b>May</b>	Customers are informed of proposed budget and rates via posting to the AlexRenew website and may provide written comments, if any. Customers invited to attend Public Hearing <b>May 22</b> .		
<b>June</b>		<b>Final Adoption</b> Board of Directors makes final decisions and adopts the AlexRenew budget for the upcoming fiscal year.	Budget adoption: <b>June 15, 2021</b> Execute adopted FY 2022 Budget starting: <b>July 1, 2021</b>

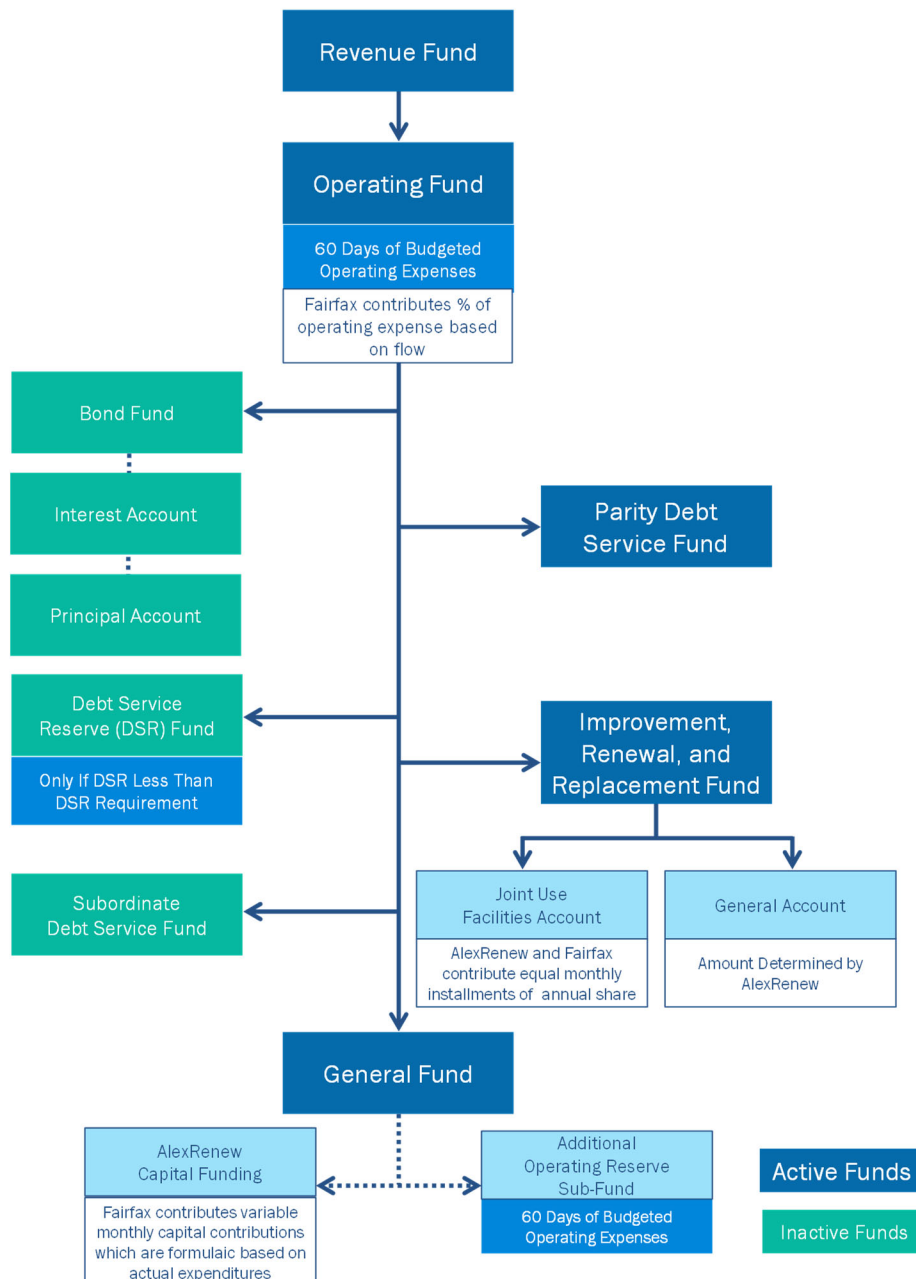

# Consolidated Enterprise Budget Statement

AlexRenew begins its annual budget presentation by preparing a Consolidated Enterprise Budget Statement (Statement) that combines all of the estimated sources and uses of funds for the upcoming fiscal year. This statement is organized in accordance with the terms mandated in Article VII of the Indenture. The primary purpose for this Statement is to demonstrate that the overall FY 2022 operating and capital budgets are in “structural” balance – which means all of the revenues and expenses are consistent with the historical financial performance, all balances that remain in the prescribed funds and accounts meet stated requirements, and if total revenues exceed total expenses, any potential excess funds are deposited in the General Fund to serve as reserves.

The graphic below provides a visual presentation of the flow of monies through the financial structure established in the Indenture. A definition for each fund and account is provided on the following page. In general, customer payments and Fairfax County operating expense charges are deposited in the Revenue Fund and are subsequently transferred to other Funds and Accounts in the order of priority (per below) and the amounts prescribed in the Indenture.

## AlexRenew Flow of Funds

# Consolidated Enterprise Budget Statement

The chart below serves as a glossary that can be used to better understand the purpose, order of priority and funding method for each of the Funds and Accounts established in the Indenture.

## AlexRenew Fund Overview

Master Indenture of Trust – Flow of Funds	
<b>Revenues</b>	Revenues means all revenues, receipts and other income derived or received by AlexRenew from owning and operating the utility system. This primarily includes AlexRenew wastewater treatment charges and Fairfax County operating expense charges.
<b>Revenue Fund</b>	Revenues are initially deposited into the Revenue Fund and then transferred to the other funds in the following order of priority.
<b>Operating Fund</b>	To the Operating Fund to pay Operating Expenses. At the end of each month, AlexRenew must ensure at least 1/6th (or 60 days) of annual budgeted operating expenses are deposited into the operating fund.
<b>Parity Debt Service Fund</b>	To the Parity Debt Service in order to pay debt service payments in equal monthly amounts such that debt service payments can be paid when due.
<b>Improvement, Renewal and Replacement (IRR) Fund – Joint Use Facilities Account</b>	To the Joint-Use Facilities Account of the IRR Fund an amount equal to 1/12th of AlexRenew’s share of the amount due.
<b>Improvement, Renewal and Replacement (IRR) Fund – General Account</b>	To the General Account of the IRR Fund in an amount predetermined by AlexRenew.
<b>General Fund</b>	To the General Fund any revenues remaining.

The Statement on the following page presents a consolidated profile of AlexRenew’s overall operating and capital budgets for FY 2022. This schedule directly follows the flow of funds mandated in the Indenture.

# Consolidated Enterprise Budget Statement

<b>Ending Balance</b>	<b>-</b>	<b>-</b>

# Consolidated Enterprise Budget Summary

The schedule below summarizes the funding sources and expenses associated with AlexRenew's FY 2022 budget. At approximately 81%, capital outlay represents the largest share of the budget. Together with the Parity Debt Service Fund at 6%, these combined expenses are 87% of the FY 2022 budget, demonstrating the capital-intensive nature of the water utility business.

The FY 2022 revenue projection is based on the rates and charges AlexRenew anticipates will be in effect for FY 2022 as further detailed on pages 14-15 to follow. The projection includes proposed rate increases, as well as certain assumptions about the impact of the COVID-19 pandemic on AlexRenew's revenues.

The operating budget shows a zero increase year-over-year. This is the second year without an operating budget increase. The historical trend shows operating expenses increase at least at the approximate rate of inflation. This reflects an effort to manage costs while our community recovers from impacts related to COVID-19.

The proposed budget also provides continued funding for improvement, repair and replacement projects, reflecting an effort to ensure timely upgrades of AlexRenew's infrastructure to maintain efficient operations. Capital spending is projected to increase very significantly in FY 2022 to fund the RiverRenew Tunnel Project.

The FY 2022 budget projects the spend down of \$8 million in general fund balance, largely to fund the cash portion of the Capital Improvement Program, as well as the utilization of \$137 million in debt financing to fund RiverRenew construction.

The pie charts on the following page depict funding sources and expenses for the FY 2022, again highlighting the significant activity related to debt financing and capital project construction associated with RiverRenew.

Condensed Summary	Adopted FY2021	Proposed FY2022	ANNUAL VAR %
<b>OPERATING REVENUES</b>			
AlexRenew Wastewater Treatment Charges	\$ 39,492,000	\$ 47,814,540	21%
Fairfax County Operating Expense Charge	11,272,272	10,785,305	-4%
	\$ 50,764,272	\$ 58,599,845	15%
<b>IR&amp;R AND CAPITAL CONTRIBUTIONS</b>			
Fairfax County IRR Contribution	\$ 3,217,340	\$ 3,346,197	4%
Fairfax County Capital Contribution	14,186,824	19,851,158	40%
	\$ 17,404,164	\$ 23,197,355	33%
<b>DEBT PROCEEDS AND OTHER SOURCES</b>			
Parity Debt Proceeds	\$ 39,770,774	\$ 137,968,696	247%

# Consolidated Enterprise Revenues and Expenses

## Consolidated Enterprise - Revenues

## Consolidated Enterprise - Expenses

# Determining Rates, Charges and Revenues

For more than fifteen years, AlexRenew has employed rate modeling to analyze, evaluate and implement an annual and long-term fee structure to support the financial obligations of the enterprise. AlexRenew has engaged an independent, third-party consultant to develop and monitor a rate model designed specifically for AlexRenew. This model is used to manage revenue performance in the current year and to forecast revenue requirements, based on anticipated operating and capital costs, each year over a 10-year time horizon.

In addition to rate modeling, the AlexRenew Board of Directors (Board) has adopted a body of Financial Policies (see Appendix A) to guide the approach to setting rates and maintaining a strong, stable and sustainable financial position. These policies target key financial metrics, represent industry best practices, and ensure AlexRenew maintains cost-efficient operations while delivering superior services for AlexRenew's customers and community.

## The Rate Modeling Process

Annually, upon completion and acceptance of AlexRenew's audited financial statements, and more frequently as necessary, rate consultants review and update the AlexRenew rate model. This process, and the model, is heavily data-driven and uses historical and projected data comprised of billing statistics, historical financial data, the current budget, and capital plan forecasts. The rate consultants perform comprehensive due diligence exercises to validate all information provided by AlexRenew and obtained from other relevant sources. Once validation is complete, the rate consultants review their findings with AlexRenew leadership to discuss observed historical trends, how they compare to prior forecasts, what the current projections are, and whether the consultants should make adjustments for known conditions, as a contingency.

The resultant revenues, and assumptions of additional debt and capital funding, are evaluated relative to AlexRenew's annual cash flow requirements and likely financial position at year-end. This iterative process for each fiscal year over the forecast period allows AlexRenew and its rate consultants to examine how subtle changes to rates or assumptions today have the potential to materially influence financial position across the forecast. It also allows for sensitivity analysis and the ability to examine AlexRenew's financial profile under various hypothetical scenarios, which is instructive to management and provides a stronger basis for recommending the timing and magnitude of potential rate adjustments.

As a single, dominant revenue source that accounts for almost 50% of operating revenues, the Wastewater Treatment Charges are critical to the funding of current operations and long-term financial viability. As a result, it is imperative to combine a thorough understanding of the rate modeling process, strict adherence to the terms of the Indenture, faithfulness to AlexRenew's Financial Policies, and the needs of the community when establishing rates and charges.

## Revenue Growth Assumptions

AlexRenew has historically modeled growth in Wastewater Treatment Charges of approximately 0.50% - 2.00% and Fairfax County Operating Expense Charges of approximately 1.00% - 3.00% when determining rates and revenues over the forecast period.

## Expenditure Growth Assumptions

AlexRenew has historically used CPI to evaluate costs over the forecast period and has commonly assumed an inflation range of 2.0% to 3.5%.

## Revenue Forecast Assumptions

For the prior FY 2021 budget, AlexRenew lowered its revenue forecast by 15% to account for the potential for COVID-19 impacts (such as lowered water usage and increased customer delinquencies) to reduce revenues. Since that time, AlexRenew has found the impacts on revenue to be very moderate, and as such, the FY 2022 revenue budget has been increased, reflecting a lower 6% revenue reduction due to COVID-19 factors for the remainder of FY 2021 and only a 3% reduction for the upcoming FY 2022.

Starting in FY 2020, AlexRenew began implementing a 7-year phased rate increase initiative, primarily to fund capital expenditures including the RiverRenew program. The revenue forecast that forms the basis of this budget includes proposed annual rate increases in FY 2022 and FY 2023, as further described on the following page.

# Determining Rates, Charges and Revenues

The following schedule details the monthly rates and charges for all individually metered residential customers and commercial customers discharging sewage to and/or requiring wastewater treatment service from AlexRenew. Commercial wastewater customers include all commercial, industrial, government and other public agencies, master-metered residential, and all other accounts or customers not otherwise classified as individually metered residential customers.

A wastewater customer’s monthly bill for wastewater interception, treatment and discharge services is based on the sum of their: (1) base charge and (2) wastewater treatment charge, as determined by water meter readings conducted by Virginia American Water, at the customer premise. The base charge serves as the minimum monthly bill for sewer service for all customers served by AlexRenew.

The AlexRenew Board of Directors approved rate adjustments in 2019 for a two-year period to begin funding the RiverRenew program. New rates went into effect July 1, 2019 for FY 2020 and again July 1, 2020 for FY 2021. AlexRenew elected to reduce the planned rate increase for the prior FY 2021 from its original projection of 11% to approximately 6.6% in recognition of the economic stress the pandemic has caused for City residents and its business community. For the upcoming FY 2022 and FY 2023, AlexRenew is proposing similar rate increases as the year prior – 6.9% for FY 2022 and 6.5% for FY 2023. These adjustments are projected to increase the average monthly bill by approximately \$3/month in each year. Based on current projections, these rate increases will allow AlexRenew to maintain its fiscal profile while funding the budget and capital program herein. The chart below details the current FY 2021 rate structure and the proposed rate structures for FY 2022 and FY 2023.

**Base Charge.** Charge per account based on meter size at the customer premise.

Description	Meter Size	Current (Effective July 1, 2020) Monthly	Proposed (Effective July 1, 2021) Monthly	Proposed (Effective July 1, 2022) Monthly
Residential Base Charge	All Meters	\$11.54	\$12.34	\$13.14
Commercial Base Charge	5/8"	\$34.63	\$37.02	\$39.42
	3/4"	\$34.63	\$37.02	\$39.42
	1"	\$86.59	\$92.55	\$98.55
	1-1/2"	\$173.17	\$185.10	\$197.10
	2"	\$277.08	\$296.16	\$315.36
	3"	\$519.52	\$555.30	\$591.30
	4"	\$865.87	\$925.50	\$985.50
	6"	\$1,731.74	\$1,851.00	\$1,971.00
	8"	\$2,770.79	\$2,961.60	\$3,153.60
Residential Customer Activation Fee		\$15.00	\$15.00	\$15.00

**Treatment Charge.** Charge per account based on water consumption as measured by Virginia American Water from meter at customer premise.

Description	Meter Size	Current (effective July 1, 2020) Per 1,000 Gallons	Proposed (effective July 1, 2021) Per 1,000 Gallons	Proposed (effective July 1, 2022) Per 1,000 Gallons
Individual Meter Residential Wastewater Charge	All Meters	\$8.13	\$8.69	\$9.26
Commercial Wastewater Treatment Charge	All Meters	\$8.13	\$8.69	\$9.26

# Revenue Fund Statement

AlexRenew’s Indenture establishes nine (9) Funds into which monies may be deposited to manage operating and maintenance, non-operating, and capital obligations. The collection and deposit of monies typically occurs monthly at specified times and in specified amounts, and in a prescribed order of priority.

AlexRenew is required to collect and deposit *Revenues*, as defined in the Indenture, in the Revenue Fund and make monthly transfers to each of its actively managed Funds. Deposits to the Revenue Fund do not include Fairfax County Improvement, Renewal and Replacement (IRR) payments or Capital Contributions. These dollars are deposited by Fairfax County directly into the Joint Use Facilities Account of the IRR Fund or the Project or General Fund for capital outlay reimbursements, as appropriate.

The schedule below presents adopted, proposed and estimated Revenues expected to be received by AlexRenew for the period FY 2021 – FY 2026, respectively. In addition, proposed Revenue transfers to various operating and non-operating Funds are provided to highlight the use or purpose of the funds.

Revenue Fund	Adopted FY2021	Proposed FY2022	VAR %	Estimated FY2023	Estimated FY2024	Estimated FY2025	Estimated FY2026

# Fairfax County Contributions

The following schedule demonstrates the method by which Fairfax County annual payments and contributions are determined based on the capacity rights Fairfax County currently receives under the Agreement. The County currently makes equal monthly Operating Expense Charge installments into the Revenue Fund, equal monthly contributions into the Joint Use Facilities Account of the IRR Fund, and variable monthly capital contributions (formulaic reimbursements based actual capital expenditures) into the General Fund.

# Operating Fund Statement

AlexRenew manages its Operating Fund by department and strategic outcome. This allows the enterprise to understand the impact of each department on the overall budget and how monies are being spent to achieve key business objectives.

**Operational Excellence.** This element of the operating budget primarily includes utilities and chemicals required to meet all regulatory compliance obligations for AlexRenew’s cleaned water product as well as ongoing operating needs such as bio-solids reuse and solids disposal.

**Public Engagement and Trust.** This operating budget category includes community education and outreach, and customer collection and billing services.

**Watershed Stewardship.** This operating budget item encompasses the costs for legal, financial, and engineering partners. It also includes the cost of supporting the operations and maintenance associated with the City’s capacity rights at the Arlington County Water Pollution Control Plant.

**Adaptive Culture.** This operating budget category covers personnel services including all compensation related costs, required safety materials, training and professional development, and licensing and dues. This operating budget item also contains the ancillary services required to ensure clean, safe water for the community and environment, including laboratory testing and research support.

**Effective Financial Stewardship.** This component of the operating budget covers all preventative and corrective maintenance for infrastructure assets, technology investments, general back office support, and annual asset renewal and insurance needs.

# Adaptive Culture Highlights

AlexRenew continues to invest in its workforce in order to recruit and retain the best talent. Over \$13 million (46%) of AlexRenew’s budgeted operating expenditures are utilized for personnel expenses, consisting of salaries and benefits. Salaries are provided for full and part time employees, while fringe benefits for qualifying employees include healthcare, retirement, social security, short and long-term disability, personal protective gear and other competitive benefits. Paid time off is provided at a rate based on years of service.

Personnel Budget		Operating Budget	
Salaries	\$ 9,381,682	Personnel	\$ 13,005,497
Benefits	3,623,815	Non-Personnel	15,381,493
<b>Total Personnel Budget</b>	<b>\$ 13,005,497</b>	<b>Total Operating Budget</b>	<b>\$ 28,386,991</b>

Other personnel and compensation highlights from the FY 2022 Budget include:

- Employees are eligible for performance-based pay increases ranging from 2.0 to 4.5% of salary. Currently, AlexRenew has 14 general salary grades. The Proposed FY 2022 Budget includes performance-based pay increases, which may be further evaluated depending on COVID-19 impacts.
- In December 2020, AlexRenew received the employee health insurance renewal rates from United Healthcare. The renewal rate was zero percent. AlexRenew will continue to offer only one medical plan option, High Deductible with Health Savings Account. AlexRenew pays 85% for employee-only premiums and continues to pay 83% of dependent coverage.
- Ninety-five percent (95%) of the employees took part in the Employee Wellness Incentive Program that ran from March 2020 through January 2021. The program encourages employees to participate in wellness program activities, events, or challenges. The Employee Assistance Program was expanded to allow for 7 free counseling visits (from 3) to enhance availability of mental health resources to AlexRenew’s staff.
- A total of 1,205 hours of safety training are planned for AlexRenew employees during FY 2022, reflecting investing in the safety, wellness, and health of AlexRenew team members

## Retirement Benefit

Budgeted funds for staff retirement are the contributions AlexRenew pays into the Virginia Retirement System (VRS). VRS administers pension plans and other benefits for Virginia’s covered public sector employees and updates the employer contribution every other even calendar year. AlexRenew’s contribution to VRS will decrease from 7.27% from FY 2019 to FY 2020 to 6.44% from FY 2021 to FY 2022. This reduction will result in cost savings of approximately \$85,000 in FY 2021 and FY 2022 for AlexRenew.

Full-time, regular employees hired since January 1, 2014 have been placed into the VRS Hybrid plan unless they are already participating in VRS from previous employment. The VRS Hybrid plan does not offer disability benefits as part of its core provisions. VRS has offered the VLDP (Virginia Local Disability Plan) for jurisdictions who do not elect to opt out. AlexRenew has opted out of the VLDP Plan and provides a comparable disability plan.

AlexRenew currently has 23 employees in the VRS Plan 1 retirement plan, which allowed enrollment before July 1, 2010. AlexRenew has 9 employees in the VRS 2 retirement plan, which was available between July 1, 2010 and December 31, 2013. Sixty-three (63) employees are enrolled in the VRS Hybrid plan, which started on January 1, 2014 and is still in effect.

## Other Post-Employment Benefits (OPEB)

OPEB funding supports retiree healthcare benefits. The FY 2022 budget provides for approximately \$173,583 in OPEB funding. AlexRenew currently has 7 retirees receiving this benefit.

## Equity in the Workplace

AlexRenew is committed to fostering, promoting, and preserving a culture of diversity and inclusion throughout the workplace. To support this commitment, our current diversity and inclusion initiatives extend to our practices and policies on recruitment and selection; compensation and benefits; professional development and training; and the ongoing development of a work environment built on the premise of gender and diversity equity. An example of one practice, all employees are also required to attend and complete biannual diversity awareness training. To continue to evolve and grow this culture, we are striving to evaluate and update these policies and practices frequently, including a recent update to our Equity in the Workplace policy in 2020. The racial makeup of AlexRenew's current workforce is 34% white, 42% Black, 5% Asian, 9% Hispanic, and 2% that identify in other categories.

# Adaptive Culture Highlights

## Voluntary Retirement Program

As part of its COVID response and to enhance employee safety, AlexRenew offered a Voluntary Retirement Program to employees with over twenty (20) years VRS service, and nine (9) employees elected to retire under this program between October 2020 and January 2021. AlexRenew also saw COVID impact its workforce, as people relocated back to hometowns and families and made other life decisions impacting their tenure at AlexRenew. AlexRenew continues to utilize the apprentice program for succession development for the trades positions.

FY 2020 Turnover	Total Number of Staff
Voluntary Turnover	13
Involuntary Turnover	3
Retirement	9
<b>Total Turnover FY 2020</b>	<b>20%</b>
Total Turnover FY 2019	14%

## Years of Service

Almost three quarters of the current workforce (70%) has been employed with AlexRenew for ten years or less. Thirty one (30%) have worked for AlexRenew for more than 10 years or more. The average years of service is currently nine (9) years. Over the past three years, the number of AlexRenew employees with less than three years of service increased while those with fifteen years service or more decreased.

Workforce Years of Service

# Adaptive Culture Highlights

## Employee Demographics

Over eighty percent (80%) of AlexRenew’s workforce fall within the ages of 30 and 60 years old with an average age of 44 years old. The percentage of the AlexRenew workforce in the 30-39 and 50-59 age range have increased considerably over the past three years, while the 60-65 age range has declined.

**Workforce Age in Years**

## Employee Home Address by County

Just over three-quarters (76%) of AlexRenew’s workforce live in Virginia (depicted in dark blue below) and eleven percent (11%) live in the City of Alexandria. The remainder live in Washington DC (4%) or in Maryland (20%).

**Employee Address by County**

# Parity Debt Service Fund Statement

The Parity Debt Service Fund includes the amounts due in FY 2022 to pay principal and interest on outstanding and projected AlexRenew debt. To date, AlexRenew has borrowed from the Virginia Clean Water Revolving Loan Fund (CWRLF) and Virginia Pooled Financing Program (VFPF) through the Virginia Resources Authority (VRA) as well as through the federal Water Infrastructure Financing and Innovation Act (WIFIA) loan program. Within the context of the Indenture, capital funding in this manner is deemed parity debt.

During FY 2021, AlexRenew issued two new sewer revenue bonds to fund construction associated with the RiverRenew capital program – a loan of up to \$185.6 million from the CWRLF and a loan of up to \$320.9 million from the WIFIA program. AlexRenew also has remaining proceeds from two prior bond issues – approximately \$3.5 million from the Series 2017A Bonds, which are invested in the Virginia SNAP fund and are expected to be spent in FY 2022, and the Series 2019 Bonds, which AlexRenew is currently utilizing to fund its PAC Blower Replacement project. A small amount of proceeds from the Series 2019 Bonds (approximately \$300,000) are projected to be remaining at the end of FY 2021 to be spent in FY 2022. In total, the FY 2022 budget assumes that AlexRenew funds \$137.9 million of its capital spending through debt or grants.

The debt service schedules below make certain assumptions about the pace of spending the debt proceeds and the repayment schedules shown may vary (but will not exceed) the levels shown below. All of AlexRenew’s outstanding bonds bear interest at fixed interest rates; the Series 2021 CWRLF Bonds at 1.35%, the Series 2021 WIFIA Bonds at a 1.88% and the Series 2019 Bonds at a 1.10%. Repayment of the Series 2019 Bonds begins in the upcoming FY 2022; repayment of the Series 2021 CWRLF Bonds are deferred until FY 2023 and the Series 2021 WIFIA Bonds until FY 2025.

AlexRenew also currently maintains a \$30 million line of credit with a commercial bank to provide cash flow flexibility. AlexRenew fully drew on the facility in FY 2021 to fund construction and expects to repay the line with proceeds of a bond issue in the future. The line of credit is bears interest at a variable rate. The line of credit is considered subordinate debt under the Indenture and as such, projected interest and fees associated with it are budgeted as an operating expense rather than included in the Parity Debt Service fund.

# IRR Fund Statement - Joint Use Facilities Account

The Improvement, Renewal & Replacement (IRR) Fund – Joint Use Facilities Account funds the project costs associated with the upgrade of infrastructure and equipment for the portions of the facility used jointly by the City and Fairfax County.

As noted in the accompanying schedule, contributions to the Joint Use Facilities Account are made annually by both AlexRenew and Fairfax County in a combined amount equal to 0.7% of AlexRenew’s estimated capital asset value for FY 2022. Fairfax County’s portion of the total contribution is also based on the allocation percentages detailed on page 16 and affirmed in the Agreement.

# IRR Fund Statement - General Account

The Improvement, Renewal & Replacement (IRR) Fund – General Account funds the project costs associated with the upgrade of infrastructure and equipment for the portions of the facility used for the benefit of the City only.

Contributions to the General Account are made annually for projects AlexRenew determines are necessary to maintain the safe and effective operation of the facility.

# General Fund Statement

The General Fund is the repository of funds remaining after deposits to all other Funds are made and may be used for any lawful purpose of AlexRenew. AlexRenew uses the General Fund to finance City-only capital improvements, contribute PAYGO (cash) funding to the Joint capital program, manage unanticipated expenditures, and maintain sufficient reserves to promote ongoing financial strength.

The General Fund balance for FY 2022 is projected to decline by approximately \$8 million as AlexRenew spends down fund balance to contribute higher levels of PAYGO to the CIP throughout the year, but it is still projected to remain strong at fiscal year-end, with a projected available balance of \$36.9 million, equivalent to over 475 days of operating expenses.

# Capital Improvement Program

## Capital Improvement Program

AlexRenew manages its capital outlay for both Joint Use and City only infrastructure and equipment through its Capital Improvement Program (CIP). The CIP is summarized in the 10-year plan and is a key element in planning for and managing to future regulatory compliance through large-scale capital investments.

The 10-year plan is an important tool used to formulate future project financing plans, maximize federal and state grant opportunities, proactively plan for the replacement or reconstruction of essential assets nearing the end of their service life, and schedule and coordinate the execution of multiple projects to minimize operational impact. The FY 2022 – FY 2031 CIP includes project cost assumptions for all capital projects, including the RiverRenew program, as well as the Improvement, Renewal and Replacement program.

While the CIP provides a long-term roadmap for planned capital expenditures, AlexRenew retains the ability to defer projects if needed, and may elect to defer certain new capital projects, depending on revenue performance throughout the fiscal year.

## Definition of Capital Projects

A capital project involves expenditures to construct or acquire assets of a relatively permanent nature such as property, plant, and equipment with a useful life that exceeds approximately two years.

## CIP Funding

Potential funding sources for CIP projects include loans from the Virginia Department of Environmental Quality (VA DEQ), Clean Water Revolving Loan Fund (CWRLF), Virginia Pooled Financing Program (VPFP), Commonwealth of Virginia Grant programs, Water Infrastructure Finance and Innovation Act (WIFIA) loans, revenue bond issues, bank loans and lines of credit, and AlexRenew pay-as-you-go (cash) funds. To comply with its Board-adopted Financial Policies, AlexRenew funds at least 15% of the annual CIP with pay-as-you-go funds.

## Alex-Only CIP

Capital projects that are the responsibility of AlexRenew only are funded pay-as-you-go from General Fund resources and/or through the use of various financing instruments. Costs associated with the Alex-only CIP are detailed on page 33 and specific project information is provided on pages 34-47.

Capital projects for which AlexRenew and Fairfax County share joint responsibility are funded pay-as-you-go from General Fund resources and/or through the use of various financing instruments. Costs associated with the Joint Use Facilities CIP are detailed on pages 48-49 and specific project information is provided on pages 50-103.

## Proposed CIP Overview

AlexRenew is proposing a FY 2022 capital budget of \$185.6 million and a total 10-year capital budget of \$721 million. Based on current project spending projections, the capital spend in FY 2022 is expected to increase by \$116 million (169%) compared to the year prior, with FY 2022 and FY 2023 representing the peak spending period for the largest of the RiverRenew projects, the Tunnel System project. The total 10-year budgeted CIP expenditures increased year-over-year by approximately 20% to reflect the updated cost estimate and contract award on the Tunnel System project and changes in other capital projects.

In addition to RiverRenew, highlights of the FY 2022 CIP include:

- Funding for City-only projects such as improvements to the Potomac Yard Pump Station, design and construction of the Innovation District Pump Station, and improvements to AlexRenew's Environmental Center
- Continued funding for Joint projects such as the Process Air Compressor (PAC) System Upgrade

# Capital Improvement Program

- New funding for Upper Holmes Run Trunk Sewer Rehabilitation allocated \$40k in FY 2022
- Investment in IT systems and infrastructure including upgrades to Campus Wide Fiber Optic Backbone, and HMI and SCADA Systems
- Funding for Biosolids Management master planning initiative
- Funding for upgrades to Preliminary/Primary Systems
- Appropriate investment in existing assets through IRR program

Highlights of the 10-year plan include:

- Annual increase to account for award of Tunnel System contract
- Continued funding for Preliminary Primary System upgrades through 2026
- Continued funding for IT systems and infrastructure and care of existing assets
- Funding for future Biosolids Management projects to come from master planning initiative
- Continued capital contributions to Arlington County
- Periodic odor control system upgrades
- Contingency based on overall capital spend

The graph below illustrates the planned capital spending over the 10-year period including the significant increase in capital spend for RiverRenew through 2025.

# Capital Improvement Program

The specific funding sources for the proposed CIP include PAYGO (cash contributions from AlexRenew’s operations and reserves), capital contributions from Fairfax County (which are determined according to negotiated percentages for the relevant project), and debt or grant funding. Per AlexRenew’s Financial Policies, at least 15% of the CIP is funded from PAYGO in each fiscal year. Expected debt and grant funding sources include proceeds from four existing AlexRenew loans – its Series 2017, Series 2019 and Series 2021 WIFA loan. Additional details on the loans can be found on pages 23-24 under the detailed Parity Debt Service Fund statement. Although funding from the debt facilities is projected to be sufficient to fund the capital plan, AlexRenew has also pursued state grant funding to support the RiverRenew program; to the extent additional grant proceeds are available in the coming fiscal years, a like amount less debt would be utilized to fund capital work that year. The graph below illustrates the planned capital funding sources over the 10-year period including the significant debt financing to be utilized in the next several fiscal years to fund the high level of ongoing capital work.

CIP Estimated Funding Sources Summary

The proposed CIP complies with all relevant AlexRenew financial policies including the required 15% PAYGO funding requirement and sufficient projected net revenues to produce coverage of debt service requirements in excess of the 1.5x policy minimum.

The pages to follow provide additional detail on the specific funding levels for each project over each of the next ten fiscal years, as well as a project sheet for each major project detailing the project’s description, justification, benefits, milestones, useful life, and impact to the community.

# Alexandria-Only CIP Project Details

The table below details the FY 2022 – FY 2031 (10-year) Alexandria-only CIP Projects and the strategic outcome to which they are attached. Following this summary are detailed project sheets for each project that include the project description, benefits, community impacts, lifetime budget, and other relevant details.

10-year Capital Improvement Program – Alexandria Only					
Projects	Watershed Stewardship	Operational Excellence	Adaptive Culture	Public Engagement and Trust	Effective Financial Stewardship
Arlington County Capital Contributions	●				
Bush Hill Service Chamber		●			
Capital Financing Fees					●
Commonwealth Interceptor Rehabilitation					●
Innovation District Pump Station Design & Construction	●				
IRR: Campus Wide Projects		●			
IRR: Collection System Projects		●			
Mark Center Pump Station Study		●			
NMF Wet Well Elimination		●			
Potomac Interceptor Rehabilitation					●
Potomac Yards Pump Station - Odor Control System Upgrade Project				●	
Potomac Yards Pump Station - Ventilation Improvement Project		●			
RiverRenew Tunnel System – Category 1*	●				

\* RiverRenew Tunnel System project sheet in Joint CIP section to include Category 1 (Alex-only) expenses

### Project Description and Justification

This subprogram to the Improvement, rehabilitation and Replacement program covers the comprehensive enterprise-wide records management policy that complies with the Virginia Public Records Act (VPRA) guidelines provided by the Library of Virginia (LVA); supporting infrastructure and network to minimize outages, disruptions and extended unavailability; monitoring and securing the AlexRenew environment and updating the emergency notification systems.

Benefits	Strategic Outcome Area
<ul style="list-style-type: none"> <li>24/7 near real time security monitoring and incident response.</li> <li>Ensure and improve compliance with federal, state and local regulatory recordkeeping directives,</li> <li>Establish a classification scheme that facilitates the capture, storage and speedy retrieval of records by staff when needed to conduct day-to-day business activities, preserve historically and culturally important records as well as provide support in litigation,</li> <li>Prevention of technological obsolesces</li> <li>Reduce physical storage space and staff resources required to maintain current paper records, and support continued and on-going awareness of staff recordkeeping responsibilities through the use of training.</li> <li>Up to date security patching for critical assets.</li> <li>And upgrading the emergency notification systems.</li> <li>Vulnerability management and monitoring of network and hosts.</li> </ul>	<ul style="list-style-type: none"> <li>Operational Excellence</li> </ul>

### Project Description and Justification

- **Project Purpose:** Minimize odor impacts of Potomac Yards Pumping Station (PS) on adjacent community.
- **Background:** The Potomac Yards Pumping Station was installed by a developer in 2009 and officially transferred to AlexRenew in 2018. The Potomac Yards Pumping Station has been experiencing elevated odors due to the configuration of the ventilation and odor control systems installed by the developer. The work proposed under this project will increase the efficacy of the odor control system.
- **Project Components:** This project includes the installation of a new odor control system and associated appurtenances.
- **Procurement Method:** Design-bid-build

Benefits	Strategic Outcome Area
<ul style="list-style-type: none"> <li>• Minimizes PS odors.</li> </ul>	<ul style="list-style-type: none"> <li>• Public Engagement and Trust</li> </ul>

### Project Description and Justification

- **Project Purpose:** To improve the Potomac Yards Pumping Station (PS) ventilation system.
- **Background:** The Potomac Yards Pumping Station was installed by a developer in 2009 and officially transferred to AlexRenew in 2018. The Potomac Yards Pumping Station has been experiencing elevated odors due to the configuration of the ventilation and odor control system installed by the developer. The work proposed under this project will increase the efficacy of the PS ventilation system and will include the declassification (in accordance with NFPA 820) specific PS areas and to protect operation and maintenance staff from potential sewer gas. Improvements are expected to be done in will be done in three phases.
- **Project Components:** This project includes the relocation of two supply air duct release points in the Screen Room closer to the potent foul air to promote better circulation of airflow; extension of an exhaust air duct to the opposite side of the Screen Room to improve foul air capture and reduce the potential for short-circuiting; installation of two volume dampers on the exhaust air ducts and a new exhaust air intake in the Compactor Room to improve airflow and move exhaust air towards the chimney.
- **Procurement Method:** Rider Contract

Benefits	Strategic Outcome Area
<ul style="list-style-type: none"> <li>• Enhances PS ventilation and protects operations and maintenance staff from potential sewer gas.</li> </ul>	<ul style="list-style-type: none"> <li>• Operational Excellence</li> </ul>
Key Milestones for FY 22	Impact on Operations or Community
<ul style="list-style-type: none"> <li>• Complete design and begin construction of ventilation improvements.</li> </ul>	<ul style="list-style-type: none"> <li>• Provides safe working environment for operations and maintenance staff.</li> </ul>

<ul style="list-style-type: none"> <li>• Recommendations from the Phase 1 and Phase 2 Technical Memorandum for the Potomac Yards Pump Station Ventilation and Odor Control System Improvements, February 1, 2021</li> </ul>	<ul style="list-style-type: none"> <li>• None</li> </ul>

# Joint Use Facilities CIP Project Details

The table below and on the following page detail the FY 2022 – FY 2031 (10-year) Joint-use CIP Projects and the strategic outcome to which they are attached. Following this summary are detailed project sheets for each project including the project description, benefits, community impacts, lifetime budget, and other relevant details. Also included are descriptions of the Improvement, Renewal and Replacement Projects that are funded from the Joint IRR Fund.

10-year Capital Improvement Program – Joint Use					
Projects	Watershed Stewardship	Operational Excellence	Adaptive Culture	Public Engagement and Trust	Financial Stewardship
Biosolids Management: Biosolids Master Plan					●
Biosolids Management: Building 55 - Additional Cooling for Digesters		●			
Biosolids Management: Building 55 - Replace Valves on W3 Cooling System		●			
Biosolids Management:: Building 55 -Solids Screen Replacement		●			
Biosolids Management: Solids/Resource Recovery Upgrade					●
Building 22 Primary Weir Observation House		●			
Building G/3 Filter Underdrain Replacement		●			
Building L: Centrifuge Replacement		●			
Campus-Wide Electrical Upgrade Sub-Program					●
Commonwealth Interceptor Pile Intrusion		●			
Environmental Center - 5 <sup>th</sup> /6 <sup>th</sup> Floor Modifications			●		
Environmental Center - Lobby Upgrade				●	
HMI Upgrade			●		
Holland Lane Realignment					●
IRR: Campus Wide Projects					●
IRR: Collection System Projects					●
IRR: Campus Digital Signage			●		
IRR: Centrate Pretreatment Facility		●			
IRR: Information Technology Projects			●		
IRR: Preliminary/Primary Infrastructure		●			
IRR: Secondary Infrastructure		●			
IRR: Solids Infrastructure					●
IRR: Tertiary Infrastructure		●			
IRR: Tertiary Treatment Improvements		●			
IRR: WRRF Fire Alarm Upgrade			●		
Main Campus Galleries Improvements		●			
Odor Control System Upgrade				●

## Biosolids Management: Building 55 - Additional Cooling for Digesters

Managing Department and Champion		Project Location				Program and Project Category			Estimated Useful Life			Lifetime Budget
Engineering		Building 55				WRRF Improvements <input type="checkbox"/> Alexandria Only <input checked="" type="checkbox"/> Joint Use			N/A			\$3,320,000
Expenditure	Prior Year	FY 2022	FY 2023	FY 2024	FY 2025	FY 2026	FY 2027	FY 2028	FY 2029	FY 2030	FY 2031	10 Yr. Total
Total	\$0	\$0	\$3,120,001	\$208,000	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$3,328,000
<b>Financing</b>												
AlexRenew	\$0	\$0	\$1,248,000	\$83,200	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$1,331,200
Fairfax	\$0	\$0	\$1,872,001	\$124,800	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$1,996,801
VRLF	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0
Grant	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0
Line of Credit	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0
<b>Project Description and Justification</b>												
<p><b>Project Purpose:</b> This project will install a new chiller system, pumps, and a heat exchange to increase the cooling capacity in the summer.</p> <p><b>Background:</b> Historically, the heat exchangers have used plant effluent water and have been unable to cool the pasteurized sludge to mesophilic anaerobic digestion temperatures (95 deg F) during summer months. Digester upset will occur if the digesters operate above the healthy digester operating range.</p> <p><b>Project Components:</b> A new chiller system, pumps, and a heat exchanger.</p> <p><b>Procurement Method:</b> TBD. The need for this project will be confirmed under the Biosolids Master Plan project.</p>												
<b>Benefits</b>						<b>Strategic Outcome Area</b>						
<ul style="list-style-type: none"> <li>• Improves digester performance during summer months.</li> <li>• Minimizes risk of digester upset.</li> </ul>						<ul style="list-style-type: none"> <li>• Operational Excellence</li> </ul>						
<b>Key Milestones for FY 22</b>						<b>Impact on Operations or Community</b>						
<ul style="list-style-type: none"> <li>• N/A</li> </ul>						<ul style="list-style-type: none"> <li>• Improved solids operations during summer months.</li> </ul>						
<b>External or Internal Adopted Plan or Recommendation</b>						<b>Changes from Prior Year CIP</b>						
<ul style="list-style-type: none"> <li>• Solids Handling and Energy Optimization Update to the Long Range Plan (CH2M, January 2017)</li> <li>• Risk Review of Processes and Assets, Risk Review Assessment (BOA WA2-2019-3, Task 4)</li> </ul>						<ul style="list-style-type: none"> <li>• Budget increased based on inflation and scope</li> </ul>						

## Biosolids Management: Building 55 - Replace Valves on W3 Cooling System

Managing Department and Champion		Project Location				Program and Project Category			Estimated Useful Life			Lifetime Budget
Engineering		Building 55				WRRF Improvements <input type="checkbox"/> Alexandria Only <input checked="" type="checkbox"/> Joint Use			N/A			\$20,400
Expenditure	Prior Year	FY 2022	FY 2023	FY 2024	FY 2025	FY 2026	FY 2027	FY 2028	FY 2029	FY 2030	FY 2031	10 Yr. Total
Total	\$0	\$0	\$20,400	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$20,400
Financing												
AlexRenew	\$0	\$0	\$8,160	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$8,160
Fairfax	\$0	\$0	\$12,240	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$12,240
VRLF	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0
Grant	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0
Line of Credit	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0
Project Description and Justification												
<p><b>Project Purpose:</b> To replace the pressure regulating valves on the pre-pasteurization system and establish their performance settings.</p> <p><b>Background:</b> Pre-pasteurization heat exchanges have not been able to cool sludge to the desired temperature in summer. It is suspected that insufficient cooling water is being provided to the system due to faulty pressure regulating valves.</p> <p><b>Project Components:</b> Pressure regulating valves</p> <p><b>Procurement Method:</b> TBD. The need for this project will be confirmed under the Biosolids Master Plan project.</p>												
Benefits						Strategic Outcome Area						
<ul style="list-style-type: none"> <li>Improves pre-pasteurization system performance.</li> </ul>						<ul style="list-style-type: none"> <li>Operational Excellence</li> </ul>						
Key Milestones for FY 22						Impact on Operations or Community						
<ul style="list-style-type: none"> <li>N/A</li> </ul>						<ul style="list-style-type: none"> <li>Increased operational efficiency.</li> </ul>

### Project Description and Justification

**Project Purpose:** To replace the existing dewatering & thickening centrifuges.

**Background:** Four thickening centrifuges (two duty, two standby) are used to thicken WAS and three dewatering centrifuges (two duty, one standby) are used to dewater digested sludge. Both systems are part of the WRRF's solids handling process and were placed into service in 2003. Both systems are expected to reach the end of their useful lives in the next few years.

**Project Components:** Centrifuges and associated appurtenances.

**Procurement Method:** TBD

### Project Description and Justification

In 2011 Greeley and Hanson performed an Energy Master Plan Study. As a result of the study, 9 projects were identified to plant reliability and safety. The UV disinfection upgrades recommended are not included in this project.

**Project C-2: Switchgear 1A Upgrades:** Switchgear “1A” was installed in 1978 to serve the Carbon Facilities in Building “G” and the Tertiary Sedimentation Tanks. The Carbon Facilities were removed in the early 2000s. The Tertiary Sedimentation Tanks remain in-service along with the building loads (HVAC and lighting). Switchgear “1A” has reached the end of its useful life. The Switchgear bus has corrosion and spare parts are difficult to find. The primary feed to Switchgear “1A” should also be replaced as part of the Switchgear “1A” upgrades.

**Project C-3: Electrical Boiler Study:** This study is to reassess the functionality of the electric boilers within a larger context of energy neutrality, sustainability and cost effectiveness. Since the size of Switchgear “C” and associated transformers are directly related to the outcome of this study, it should be performed before specifying the replacement for Switchgear “C”.

**Project C-4: Arc Flash Hazard Reduction Project:** Switchgears SS-1 and SS-2 and Switchgears “L-1” and “L-2” have very dangerous arc flash ratings. This would retrofit Switchgears SS-1 and SS-2 with remote Trip/Racking devices and Switchgears “L-1” and “L-2” with ARMs devices to lower arc flash hazards for electricians performing routine maintenance.

**Project C-5: Emergency Power for Control Room:** The power supply to the control room is currently backed up with a single UPS. This UPS is fed from a single plant bus, and there is currently no second feed from the other plant bus to the control room. In the event of the total loss of the bus feeding the UPS, the control room will be out of power when the UPS batteries are exhausted, which will result in a loss of the SCADA system used to monitor and operate the treatment plant.

## Campus-Wide Electrical Upgrade Sub-Program (continued)

It is recommended that improvements to the control room power supply include an ATS connected to both busses of Switchgear "1A" that will provide a real time emergency power backup system for the plant's SCADA system including UPS power. Step the second source down to 208 volts from 480 volts and connect the two sources to the control room UPS power system through a new ATS. Provide an external manual maintenance bypass switch to remove the UPS from the circuit for maintenance without losing power to the control room. A separate standby generator should also be considered.

**Project C-6: Switchgear "C" Upgrades:** Switchgear "C" was installed in 1976 to serve the Rotating Biological Contactors (RBCs) and the gravity thickening facilities. As new improvements were incorporated into the plant processes, more loads and MCCs have been added to Switchgear "C". Currently Switchgear "C" supplies power to the following Motor Control Centers (MCCs) and facilities:

- MCC-MC-2: Abandon RBC Equipment and building loads including MCC-MC-1
- MCC-MT-1: Gravity Thickening Facility installed in 1981
- MCC-N-A1B1: UV Disinfection Facility
- MCC-F-1A1B: Post Aeration and Plant Water (W3)
- MCC-55 and 55-C: Pre-Pasteurization
- Electrical Boilers 1 and 2

Switchgear "C" has reached the end of its useful life and is currently overloaded. If one of the electrical feeds is lost and the tie breaker must be closed to restore service, Switchgear "C" cannot support the downstream loads without intentionally disabling the electric boilers. MCCs MT-1, MC-1, and MC-2 have also reached the end of their useful life and each has several buckets/breakers that are abandoned. MCC-MC-1, and MCC-MC-2 should be consolidated into a single double ended MCC. The UV Disinfection Facility upgrades should be separated from Switchgear "C" upgrades. Transformers TC-1 and TC-2 serving Switchgear "C" should be replaced during Switchgear "C" upgrades with transformers sized for the remaining loads on the switchgear less the UV processes. New conductors should be installed from SS-1 to the new TC-1 and TC-2 transformers and from the TC-1 and TC-2 transformers to the transformers servicing MCC-20-1A1B. New conductors will also be required between Switchgear "C" and the downstream MCCs.

**Project C-7: Utility Supply Improvements:** Analysis of power reliability requirements for this site indicates that the provisions of the Virginia DEQ SCAT Regulations define the mandatory level of electrical reliability. There are two aspects of the current utility delivery system required modification to improve the regulatory compliance and electrical reliability of utility supply, which are described are relocation of one of the two Dominion aerial distribution feeders and addition of a fire block between the Dominion transformers.

**Project C-8: Access Building 23 Electrical Upgrades:** The switchboard in Access Building 23 provides power to Return Activated Sludge Pumps, Waste Activated Sludge Pumps, and the Secondary Sedimentation Tank Sludge Collection equipment. The two main breakers and the tie breaker in Switchboard 23 are no longer supported. A complete shutdown of the switchboard will be required to replace the tie breaker.

**Project C-9: Building "G" Electrical Upgrades:** Building "G" was installed in the late 1970s to house the Carbon Facilities and the Tertiary Sedimentation.

**Campus-Wide Electrical Upgrade Sub-Program (continued)**

Tanks support facilities. The Carbon Facilities were removed in the early 2000s. The Tertiary Sedimentation Tanks remain in-service along with miscellaneous Building “G” loads (HVAC and lighting). The major Motor Control Centers (MCCs) that supply power to these facilities are as follows:

- MA-1: Building “G” loads, and Intermediate Pump Valves
- MA-2: Building “G” loads, and abandon Carbon Facilities
- MA-3, MCC G1, MCC G2, and PA-1: Building “G” loads
- PA-2 and PA-3: Building “G” loads and Tertiary Sedimentation Tanks

MCCs MA-1, MA-2, MA-3, PA-1, PA-2, and PA-3 have reached the end of their useful life and spare parts are difficult to find. It is recommended that these MCCs be upgraded to improve the electrical reliability of Intermediate Pumping Station and the Tertiary Sedimentation Tanks.

<b>Benefits</b>	<b>Strategic Outcome Area</b>
<ul style="list-style-type: none"> <li>• Ensure aged or intermediate projects have not compromised electrical reliability.</li> </ul>	<ul style="list-style-type: none"> <li>• Effective Financial Stewardship</li> </ul>

#### Project Description and Justification

- This subprogram covers all improvement, rehabilitation and replacement projects associated with non-process facilities work at the WRRF. This includes, but is not limited to roof, concrete, HVAC, reclaimed water system, vehicles, and odor control repairs/replacement. This subprogram also includes the AlexRenew website.

#### Benefits

- Full optimization of the Methane Gas supply generation using the Absorption Chillers
- Increased brand recognition
- Increased brand recognition.
- Maintain AlexRenew's odor quality control
- Maintain reliability and effectiveness of the steam, chiller, odor control, plant air, and HVAC systems
- Maintain the availability and integrity of the cranes and buildings
- More efficient and reliable vehicles for employee transportation
- Reduce carbon emissions
- Reduce citizen and city official complaints about website.
- Use of reclaimed water allows for AlexRenew to reduce its water usage

#### Strategic Outcome Area

- Operational Excellence

### IRR: Campus Wide Projects (continued)

Key Milestones for FY 22	Impact on Operations or Community
<ul style="list-style-type: none"> <li>• Accept delivery of new vehicle</li> <li>• Complete plant air system, chiller, HVAC system and crane repairs</li> <li>• Complete rebuilt/replace of one (1) Odor Scrubber</li> <li>• Complete review of valve exercising program</li> <li>• Complete roof and drain replacements</li> <li>• Pass boiler inspection Complete Plant Air System repairs</li> <li>• Replace front entry doors with a more reliable system for staff and public use</li> <li>• Start of reclaimed water system testing</li> </ul>	<ul style="list-style-type: none"> <li>• Environmental Air Quality Control</li> <li>• Increase availability of reclaimed water.</li> <li>• Increase equipment availability for process and high flow events</li> <li>• Increase equipment reliability for future RiverRenew Project</li> <li>• Lessen the carbon footprint</li> <li>• Maintain proper air change in Class I DIV II environments</li> <li>• Maintain roof integrity to prevent equipment damage.</li> <li>• Maintain safety for crane operators</li> <li>• Maintain the esthetic of the plant to blend in the surrounding community</li> </ul>
External or Internal Adopted Plan or Recommendation	Changes from Prior Year CIP
<ul style="list-style-type: none"> <li>• SOP-X-NMF Odor Control System Carbon Replacement (by CH2M 12/30/15)</li> <li>• Website Reinvention Business Case (12/19/17)</li> <li>• GHD Site Visit report from 06/14/2018</li> </ul>	<ul style="list-style-type: none"> <li>• Updated to reflect rehabilitation timing changes.</li> </ul>

Line of Credit	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0
Project Description and Justification												
<ul style="list-style-type: none"> <li>This project will upgrade the digital signage across campus. This upgrade will enable more comprehensive and informative communications across campus to all staff, in an efficient, simultaneous, and visually appealing manner. It will include the digital signs, software, installation, programming, and training. Annual maintenance will also be required.</li> <li>The digital signs have been even more widely utilized since COVID-19 required physical separation of staff</li> </ul>												
Benefits						Strategic Outcome Area						
<ul style="list-style-type: none"> <li>Allows for fast and efficient communications with AlexRenew staff.</li> <li>Staff feedback indicated that the digital signs are the preferred method of communication about news and events across AlexRenew's campus.</li> <li>The upgrade will allow the placement of more signs in high traffic areas. The upgrade will also allow for more dynamic and static content to be used on the signs.</li> </ul>						<ul style="list-style-type: none"> <li>Adaptive Culture</li> </ul>						
Key Milestones for FY 22						Impact on Operations or Community						
<ul style="list-style-type: none"> <li>Replacement computers ordered in FY2021 to improve security</li> <li>Acquire, program and start up new digital signage network, with an option to add additional signage at the completion of RiverRenew.</li> </ul>						<ul style="list-style-type: none"> <li>Installation will require minor electrical maintenance team assistance.</li> <li>Will provide team with the information to communicate more effectively with each other, and to attend key events.</li> </ul>						

## IRR: Centrate Pre-Treatment Facility Improvements

Managing Department and Champion		Project Location				Program and Project Category			Estimated Useful Life			Lifetime Budget
Engineering		Building 69 (CPT Facility) Building L (Basement)				WRRF Improvements <input type="checkbox"/> Alexandria Only <input checked="" type="checkbox"/> Joint Use			20 Years for Equipment			\$516,000
Expenditure	Prior Year	FY 2022	FY 2023	FY 2024	FY 2025	FY 2026	FY 2027	FY 2028	FY 2029	FY 2030	FY 2031	10 Yr. Total
Total	\$185,000	\$258,000	\$0		\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$258,000
Financing												
AlexRenew	\$74,000	\$103,200		\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$177,200
Fairfax	\$111,000	\$154,800		\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$265,800
VRLF	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0
Grant	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0
Line of Credit	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0	\$0
Project Description and Justification												
<ul style="list-style-type: none"> <li>• The centrate pre-treatment facility uses the DEMON™ process to reduce the nitrogen content of the dewatering centrate prior to return to the BRBs. The facility was placed into operation in 2015 and operates well but requires capital improvements for improved performance. Improvements include replacing the existing cyclone feed pumps which are prone to frequent clogging and implementing some modifications to the centrate transfer piping to divert poor quality centrate to gravity thickener 5 or the blended sludge tank.</li> <li>• The project is proposed to be procured through a Design-Bid-Build method with AlexRenew using one of their on-call contractors. Some of the work will be done by the blower vendor (Neuros) on their equipment.</li> </ul>												
Benefits						Strategic Outcome Area						
<ul style="list-style-type: none"> <li>• Increase reliability of the system.</li> <li>• Reduce downtime and maintenance needed on the pumps and process upsets caused by poor quality centrate.</li> </ul>						<ul style="list-style-type: none"> <li>• Operational Excellence</li> </ul>						

**IRR: Centrate Pre-Treatment Facility Improvements (continued)**

Key Milestones for FY 22	Impact on Operations or Community
<ul style="list-style-type: none"> <li>• Perform study on type of pumps to use for replacement</li> <li>• Develop engineering concept for piping modifications for centrate diversion</li> </ul>	<ul style="list-style-type: none"> <li>• Improving capture of dirty centrate away from the CPT system would reduce the amount of manual cleaning that has to be performed on the strainers and the pumps by plant personnel.</li> <li>• Automating the blower operation would reduce/eliminate the need for manual cycling/exercising of the blowers and improve air flow control and process performance.</li> <li>• Operations and maintenance personnel should be engaged in identifying possible solutions and selecting alternatives to be implemented.</li> </ul>
External or Internal Adopted Plan or Recommendation	Changes from Prior Year CIP
<ul style="list-style-type: none"> <li>• Centrate Pre-Treatment Recycle Pumps Performance Deterioration TM (CH2M, May 2016)</li> <li>• Summary of Centrate Pre-Treatment Blower Failure Investigation, Evaluation and Recommendations TM (CH2M, February 2017)</li> <li>• Email correspondence from Grace Richardson/AlexRenew on July 5, 2017 providing direction on how to proceed.</li> </ul>	<ul style="list-style-type: none"> <li>• Pump replacement and centrate piping modifications were moved to FY 2021.</li> </ul>

### Project Description and Justification

- **Building G/3: Automate TST Flow Control:** Typical flow through each tertiary settling tank (TST) is 5 to 10 MGD, which is significantly below the design criteria of 18 MGD. Low-flow operation of the TSTs allows for a slow build-up of material on the settling plates that is flushed out during high flows or wet weather events. Intermittent operation at higher flow rates of one or two TSTs will mitigate the impact of the solids flush compared to when the flow rates to all TSTs suddenly increase, such as during wet weather. Furthermore, regular high-flow operation allows more TSTs to be offline, which would support the routine deep cleaning schedule. The project will update SCADA programming to automate the influent flow control valves and the flow split between the TSTs.
- **Building G/3: Upgrade System for Sludge Recirculation:** Sludge recirculation is a recognized industry practice to improve tertiary settling tank (TST) operations and reduce alum dosing. AlexRenew previously used the sludge recirculation system regularly but discontinued the practice since significant operator time was required to operate the manual valves. This project will motorize and automate 24 valves to simplify the sludge recirculation system for regular use in TST operations. It assumes 2 valves for each of the 12 pumps (i.e. 24 valves total) would be automated; the automated valves would be used to direct sludge to recirculation or wasting.
- **Building G/3: Assess Filter Underdrain:** The tertiary treatment filtration system includes 22 mono-media, gravity filters. The condition of the underdrains cannot be directly assessed or observed without hiring a specialty contractor to remove the media. As part of the Filter & TST Risk Assessment (2019), O&M personnel were advised to monitor surface boils since the boils can indicate damaged air headers or underdrains. If filter performance is affected or boils significantly worsen, the project will include hiring a specialty contractor to remove the media in one of the filters, inspect the underdrains and air headers, and develop a condition report that could be used to estimate the required repairs for the system. If the existing filter media is of good quality, recommendation may include re-balancing media between the filters (using existing media) while this equipment is on-site.

**IRR: Tertiary Treatment Improvements (continued)**

Benefits	Strategic Outcome Area
<ul style="list-style-type: none"> <li>• Intermittent high-flow operation will reduce large solids flushes during wet weather events and will allow more TSTs to be offline for routine deep cleaning.</li> <li>• Automating the system for high-flow operation will provide improve wet weather operations and facilitate O&amp;M activities.</li> <li>• Upgrading existing equipment to reduce Operator effort required and improve usability.</li> <li>• Sludge recirculation will decrease chemical spending (i.e. alum) and improve final effluent quality.</li> <li>• Assessment of equipment condition and remaining life will be used to maintain filter system and increase equipment lifetime and performance.</li> </ul>	<ul style="list-style-type: none"> <li>• Operational Excellence</li> </ul>

### Project Description and Justification

- The first step of this project is to perform an evaluation, alternative analysis and sub project prioritization for the entire preliminary/primary systems. As a result of this evaluation, the subprojects listed below may be completed. The evaluation may result in different subprojects.
- The primary sludge pumping system consists of twelve (12) pumps which remove sludge from the bottom of the primary settling tanks and pump it to the gravity thickeners. The primary sludge pumps need rehabilitation and/or replacement due to corrosion and age. The primary sludge pumps may not have adequate capacity should CEPT be implemented. This project also includes new variable frequency drives (VFDs) for the pumps and improvements to the ferric chloride and polymer distribution systems for improved CEPT performance. These are proposed to be procured through a Design-Bid-Build method.
- The Wet Well Sluice Gates 1 and 2 are scheduled to be rebuilt based on O&M recommended runtime hours.
- Building A: Operate Coarse Screens with New Level Sensors: Trash accumulates in processes downstream of coarse screens. Coarse screens to operate on head differential instead of on a timer, which will increase solids capture and extend the screen life. Recommendation is to install a different type of level sensors (e.g. ultrasonic; radar) downstream and upstream of the screens to monitor differential level across the screen. Controls (SCADA programming) will be modified to incorporate new sensors and set points.
- Building K: Operate Fine Screens with New level Sensors: Trash accumulates in processes downstream of fine screens. Fine screens to operate on head differential instead of on a timer, which will increase solids capture and extend the screen life. Recommendation is to install a different type of level sensors (e.g. ultrasonic; radar) downstream and upstream of the screens to monitor differential level across the screen. Controls (SCADA programming) will be modified to incorporate new sensors and set points.
- Building K: Replace Grit Cyclone Underflow Boxes: Grit underflow boxes were installed in 2001 and are nearing the end of their useful life with clear signs of corrosion. Failure of the boxes could result in grit spills and lost equipment functionality/redundancy. Recommendation is to replace corroded grit cyclone underflow boxes since these are easily replaced and will increase the overall lifespan of the entire grit system.
- Building 22: Remove Obsolete Piston Pumps: The piston pumps are no longer in-service nor needed since the existing pumps are redundant/obsolete. Recommendation is to remove the old piston pumps, especially if equipment is already mobilized in the area to replace the primary pumps. The work can then be completed for very negligible additional cost.

### Preliminary/Primary System Upgrades (continued)

- **Building K: Scum Concentrator Replacement:** The existing primary scum handling system has experienced extended outages. However, primary scum disposal is fundamental to reduce solids loadings; to improve performance of preliminary, primary, and secondary treatment; and to reduce the risk of foaming and Nocardia growth in the secondary treatment. This project will replace the existing scum concentrator system with a new scum screening system. Scum screening, comprised of a rotary wedgewire drum screen, a dewatering press/conveyor, and ancillary equipment, has similar layout/area requirements and has successfully replaced scum concentrators at other plants.
- **Building A: Install Coarse Screen Platform:** There is limited access to the rake motor at the top of each coarse screen impacts maintenance. Equipment reliability is critical, because the process does not have a redundant unit, and problems due to trash/solids can become amplified in downstream processes. Furthermore, limited access increases safety risk for staff. Recommendation to install a platform for accessing the top of the screens, which will facilitate regular maintenance of the motor and drive and improve plant safety.
- **Building A: Coarse Screen Replacement:** Recommendation is to replace coarse screens with either in-kind (same technology) or with new technology, including a smaller bar rack (e.g. 2-inch spacing vs. 3-inch).
- **Building K: Fine Screens Replacement:** The fine screening system consists of four screening channels located in Building K and was placed into operation in 2001. Each screening channel has an automatically cleaned fine screen with 6 mm (1/4-inch) openings. The capacity of this system is adequate to treat the planned peak raw influent flow (116 MGD) plus 2-3 MGD of recycles (drains and stormwater) with three channels in service (one redundant channel). The existing screens (Parkson AquaGuard) have been identified as candidates for replacement because of their poor performance. The screens do not effectively remove debris from the plant flow due to the configuration/design of the screen. Undesirable rags and trash frequently pass through the screening process and cause equipment problems/clogging downstream. The project will replace the fine screening equipment with newer technology such as center-flow band screens with 6 mm perforated plate openings or other technology that provides better capture. The screenings washer/press would also be replaced.
- **Building K: Grit Handling Reconfiguration:** Reconfigure grit handling system to discharge directly into truck bay below and to bypass the existing conveyor system. This will remove two conveyors from the system. By keeping the abrasive grit material out of the other conveyors, it will reduce maintenance and increase equipment life on the remaining system. A material distribution system will be installed on the chutes that drop into the truck bay to avoid mounding of grit in the trailers.
- **Building K: Grit Handling Install V-force Baffle:** Grit has been observed downstream of the grit chambers (Pista Grits). Recommendation is to improve Pista-Grit performance with V-force baffle (by Smith & Loveless) or equivalent technology. Modifications increase the grit extraction path, thus increasing the amount of grit captured on the chamber's floor and reducing grit build-up near the inlet channel.
- **Building K: Replace Grit Handling Equipment:** Recommendation to replace grit cyclones/classifiers with newer technology (i.e. Huber or Vulcan). With the new system, the equipment layout can be reconfigured to eliminate the grit transfer conveyors and result in long-term O&M savings.
- **Building 22: Assess Primary Weir House Observation Condition:** The Primary Weir Observation House shows evidence of rusting and metal corrosion, likely due to the high humidity environment. Recommendation is to assess the corrosion of the existing Primary Weir Observation House and identify the required repairs/schedule.
- The Raw Sewage Pump Station was originally constructed in 1954. The pump station consists of six vertical, end-suction, centrifugal type pumps that pump the full influent flow of the plant. The pumps are re-built on a scheduled basis (about 1 per year). The pump station can pump the design peak flow of 116 MGD plus 2-3 MGD of internal recycles (stormwater and drains). However, the pump station is still not performing as indicated by the pump curves. Newly rebuilt pumps tend to pump 5-6 MGD more flow than older pumps.

### Project Description and Justification

- **Project Purpose:** To decommission and demolish Building J and relocate essential functions (e.g., the WRRF lab) contained therein.
- **Background:** The driver of this project is the RiverRenew Tunnel schedule. The rapid relocation of Building J systems and spaces is required to ensure continuous plant operations (including the lab) and to allow for the demolition of Building J and the construction of the tunnel shaft.
- **Project Components:** Construction of a new lab (approx. 4,000-5,000 sf) on the ground floor of Bldg. G/2 (where the existing locker rooms are currently located), reconfiguration/remodeling of the existing lockers to fit current staffing needs (approx. 70 lockers), a new training/break room located in the first floor of G/1, a new server room located in the second floor of G/2 and a corresponding electrical room, a new chilled water plant located in the basement level of Bldg. G/2, relocation of existing ductbank, a new walkway from the new laboratory in Bldg. G/2 to the people spaces in Bldg. G/1, a new control room on the first floor of Bldg. G/1, a new roof on Bldg G/2, relocation of the PBX room, relocation of the fire alarm panel/autodialer, temporary locker rooms, new egress stairwell from Bldg G/2 and demolition of Building J. The scope of this project was expanded in FY20 to include: The replacement of the roof of Building G/2; A walkway from the new laboratory in Building G/2 to the new people spaces in Building G/1; A new control room in Building G/1; Expansion of the break/training space in Building G/1; and Temporary locker room facilities.
- **Procurement Method:** The project was procured through a Design-Bid-Build method with AlexRenew pre-selecting and pre-purchasing critical equipment with long procurement lead times such as the chillers, the air handling units, the motor control centers (MCC) and laboratory casework.

Benefits	Strategic Outcome Area
<ul style="list-style-type: none"> <li>• Relocation of the laboratory and other functions currently housed in Building J prior to start of tunnel shaft construction will minimize disruption to plant operations, increase plant personnel safety and will consolidate operator/maintenance/lab spaces in one area of the plant (Building G).</li> </ul>	<ul style="list-style-type: none"> <li>• Operational Excellence</li> </ul>

## RiverRenew Building J Facilities Relocation and Decommissioning (continued)

### Project Description and Justification

**Need:** In April 2017, a Virginia law was passed that required Alexandria's four existing combined sewer outfalls be brought into compliance by July 1, 2025.

**Background:** In June 2018, the Virginia Department of Environmental Quality approved a Plan that complied with the new law through the design and construction of a tunnel system to capture and convey combined sewage to AlexRenew for treatment. In July 2018, the Plan was re-branded as RiverRenew.

**Project Components:** The RiverRenew Tunnel System includes:

- Waterfront Tunnel: 2-mile long, 12'-0" diameter segmentally lined tunnel.
- Hooffs Run Interceptor: 2,700-foot long, 6'-0" open-cut sewer.
- Four diversion chambers to direct combined sewer flows to the Waterfront Tunnel and Hooffs Run Interceptor.
- Four shafts ranging from 35-feet to 65-feet in diameter.
- Tunnel Dewatering and Wet Weather Pumping Station: 20-mgd tunnel dewatering and 130-mgd wet weather pumping station, including a new superstructure at AlexRenew.

**Procurement Method:** In November 2020, AlexRenew awarded a fixed-price design-build contract to Traylor-Shea Joint Venture in the amount of \$454.4 million following a 2-step (RFQ/RFP) procurement process.

Benefits	Strategic Outcome Area
<ul style="list-style-type: none"> <li>• When complete, the RiverRenew Tunnel System will capture and convey 130 million gallons of combined sewage for treatment at AlexRenew each year. Occurrences of combined sewer overflows will be reduced from 70 to less than 4 events each year. This will promote cleaner, healthier waterways for the community and wildlife.</li> <li>• Construction sites will be restored in a sustainable manner to connect the community to Alexandria's waterways.</li> </ul>	<ul style="list-style-type: none"> <li>• Watershed Stewardship</li> </ul>

### Project Description and Justification

The AlexRenew WRRF storm sewer system is subdivided into seven drainage areas (DAs). Stormwater runoff within the three drainage areas on the western side of the facility (DAs 1, 2, and 3) discharge directly to Hooff's Run. DAs 4 and 6 discharge to the Virginia Department of Transportation (VDOT) Municipal Separate Storm Sewer System (MS4) and to the City of Alexandria MS4, respectively. Stormwater inlets within the final two drainage areas (DAs 5 and 7) convey stormwater directly to the Potomac Yard Interceptor and the Commonwealth Interceptor, respectively. Stormwater from these drainage areas (DAs 5 and 7) are directed to the AlexRenew wastewater treatment plant headworks. Drainage areas that discharge to the interceptors are not a part of this project as additional pretreatment stormwater BMPs is not a priority. Proposed stormwater BMPs in this analysis are located within the five drainage areas which discharge to adjacent surface water bodies or to adjoining storm sewer systems (DAs 1, 2, 3, 4, and 6). 8 BMP are recommended. Ponding that was also studied in the report is not a part of this project.

### Project Description and Justification

- **Purpose:** To inspect and rehabilitate portions of the Holmes Run Trunk Sewer (HRTS).
- **Background:** An Interceptor System Condition Assessment was completed in June 2017. The work will be conducted in phases:
- **Project Components:** TBD
  - Phase 1: Rehabilitate 30"/36" pipe in Reach 8 and 9 from the Reach 7 to Dowden Terrance (~ approximately 5,700 feet). (This work was previously included in the CIP for FY2016, to address capacity limitations, but work has not yet begun; re-inspection is necessary.) Design is scheduled for FY24-25. Construction is scheduled for FY26-27.
  - Phase 2: Surface aggregate visible defects are present throughout many pipe segments in Reaches 4 & 5. The proposed rehabilitation extents span over 3,000 linear feet, beginning with manhole 5514 at the Fairfax County sewer connection in Cameron Run Regional Park, through manhole 4243 downstream of the original County sewer connection at Cameron Station. Pipe diameters range from 48" to 72".
- **Procurement Method:** TBD

## Indenture and Financial Policy Compliance

The schedule below demonstrates AlexRenew’s financial profile according to the current and proposed budget, as measured by its two major financial metrics – cash reserves and debt service coverage. As it relates to liquidity, AlexRenew’s Indenture requires it to maintain at least 60 days cash on hand in the Operating Fund and an additional 60 days cash on hand in the General Reserve sub-fund, for a total cash reserve requirement of at least 120 days of operating expenses. As it relates to debt service coverage, AlexRenew’s Indenture requires that net revenues cover annual debt service payments by 1.1x while the Financial Policies require a more stringent 1.5x. In both cases, the proposed budget forecasts compliance with these policies and indicate a healthy financial profile.

Indenture and Financial Policy Compliance	Adopted FY2021	Proposed FY2022
<b>Cash Reserve Requirement</b>		
<b>Operating Fund</b>		
60 Days Current Year Budgeted Expenses	4,666,355	4,666,355
Projected Ending Balance	4,666,355	4,666,355
Excess (Deficiency)	-	-
<b>General Reserve sub-Fund</b>		
60 Days Current Year Budgeted Expenses	4,666,355	4,666,355
Projected Ending Balance	4,666,355	4,666,355
Excess (Deficiency)	-	-
<b>Total Cash Reserve Requirement - 120 Days</b>	<b>9,332,710</b>	<b>9,332,710</b>
<b>Debt Service Coverage (DSC) Requirement</b>		
Wastewater Treatment Charges	\$ 39,492,000	\$ 47,814,540
Fairfax County Operating Expense Charge	11,272,272	10,785,305
Interest Income	115,000	115,000
Gross Revenue Available for Debt Service:	<b>\$ 50,879,272</b>	<b>\$ 58,714,845</b>
Operating Expenses	\$ (28,386,991)	\$ (28,386,991)
Net Revenues Available for Debt Service	<b>\$ 21,992,281</b>	<b>\$ 29,827,854</b>
Total Annual Debt Service	<b>\$ 13,820,704</b>	<b>\$ 13,919,620</b>
All-in Debt Service Coverage	<b><u>1.60x</u></b>	<b><u>2.15x</u></b>
Financial Policy Target	<b>1.50x</b>	<b>1.50x</b>
Indenture Target	<b>1.10x</b>	<b>1.10x</b>

## **Appendix A – Financial Policies**

**Alexandria Sanitation Authority  
Financial Policies  
Adopted August 17, 2010**

The Alexandria Sanitation Authority (ASA or Authority) is a special purpose governmental unit created by the City Council of Alexandria, Virginia (City Council) in 1952 for the purpose of constructing, operating and maintaining a wastewater treatment system (System) for the City of Alexandria, Virginia (City). ASA is governed and administered by a Board of Directors (Board) with five members who serve staggered terms and are appointed by the City Council. The General Manager oversees ASA's operations and plans for the construction, maintenance, repair and financing of the System. ASA operates as an enterprise fund, has no taxing power and receives no financial assistance from the City.

ASA recognizes that one of the keys to sound financial management is the development of a formal financial policy. This view is confirmed by bond rating agencies, investors and the Government Finance Officers Association. Establishing formal financial policies is also a common practice among comparable water and wastewater authorities throughout the Commonwealth and the United States.

The financial policy is designed to help protect ASA's financial resources by:

1. Promoting sound financial management;
2. Guiding ASA and its managers in policy and debt issuance decisions;
3. Establishing appropriate levels of operating cash reserves;
4. Developing a system to efficiently finance necessary capital improvements;
5. Ensuring the legal and prudent use of ASA's debt issuance authority;
6. Providing a framework for ASA to achieve a strong credit rating, and
7. Maintaining reasonable and well justified levels of rates and fees in accordance with the financial policy.

In general, these financial policies are more restrictive and require higher standards than the legal requirements contained in the Master Indenture of Trust (Bond Indenture), which is the agreement between ASA and debt holders. These financial policies will be reviewed periodically and updated as appropriate.

The following are the financial policies that will guide ASA's financial management, capital planning and debt financing.

**1. Debt Service Coverage**

- a. For FY2011 through and including FY2013, ASA will adopt budgets that it projects will enable ASA to maintain annual debt service coverage (Coverage) of 1.40 times Net Revenues, as defined in the Bond Indenture, on all senior and parity debt. Beginning in FY2014 and thereafter, ASA will maintain Coverage of at least 1.50 times on all senior and parity debt.

**2. Reserves**

- a. An important metric of ASA's financial flexibility is its liquidity as measured by available cash and reserves. These reserve policies identify amounts available for known risks and obligations and set minimum funding goals that may be used in emergency or other unexpected situations as they arise. The reserves represent an earmarking for budgetary and financial

policy purposes. These reserves are in addition to existing legal reserves required by the Master Indenture of Trust (Bond Indenture) and any funds earmarked for capital improvements.

- b. ASA will maintain a balance equal to at least 120 days of the current years budgeted amount for operating and maintenance expenses. As required by the Bond Indenture, one sixth of the current year's budgeted amount for operating expenses (60 days) will be held in the Operating Fund. The remainder of the reserves will be held in the General Reserve Fund, a subfund of the General Fund. In the event the General Reserve Fund is used to provide funding for unanticipated expenses or otherwise drops below the policy level, the General Manager will submit a plan in writing to the Board that will restore the General Reserve Fund to the policy level over a period not to exceed four years.
- c. All other funds will be funded as required by the Bond Indenture, with a summary as follows:
  - i. Senior Debt Service Fund: An amount that will cause the balance on deposit to be sufficient to pay the principal and interest on the respective payment dates.
  - ii. Improvement, Renewal and Replacement Fund (IRR): An amount equal to the Alexandria portion (40%) of the annual calculation of the required contribution to the IRR Fund.
  - iii. General Fund: Any remaining amounts after the required deposits.
  - iv. Debt Service Reserve Fund: For senior debt, an amount equal to the Debt Service Reserve Fund Requirement as defined in the Bond Indenture. There is no Debt Service Reserve Fund Requirement for ASA's parity debt.
- d. When necessary and prudent, ASA may create additional accounts within the General Fund for specific purposes. These accounts could include accounts for capital projects, risk management and revenue stabilization, among others.

### **3. Budgetary Principles**

#### **a. Annual Operating Budget Proposals**

- i. Per Section 9.3 of the Bond Indenture, ASA is required to adopt a budget for the System for the ensuing fiscal year before the beginning of each fiscal year. The annual budget is required to be prepared in such a manner as to show in reasonable detail the estimated revenues, operating expenses, IRR amounts, debt service amounts, other costs and expenses and the amount of Net Revenues available to meet the Revenue Covenant per the Bond Indenture.
- ii. In conjunction with the budget requirements in the Bond Indenture, the Board will strive to adopt an operating budget that:
  - 1. Is structurally balanced whereby current budgetary revenues are sufficient to meet current budgetary expenses (those that are ongoing in nature);
  - 2. Has fees and user charges at levels intended to support the direct and indirect cost of the activity;
  - 3. Sets fees and user charges with the intent to provide the lowest reasonable fees and user charges over time, not necessarily the lowest fees and user charges right now.

4. Is at a level necessary to ensure the adequate maintenance and operations of the wastewater system;
5. Includes amounts necessary to maintain the required reserve balances as defined in these policies;
6. Enables ASA to meet the debt service coverage policy defined herein; and
7. Funds at least 15 percent of its capital improvement program in cash.

iii. Capital Improvement Program (CIP)

1. Each year ASA will adopt a ten-year CIP that identifies projects to be undertaken over next ten years to meet projected needs for infrastructure renewal, expansion, and replacing old or new facilities.
2. The term of any debt financing will not exceed the aggregate useful lives of the related projects.
3. The CIP will identify anticipated capital improvement costs and associated operating costs.

b. Long-Range Financial Forecast

- i. Beginning with the planning for the FY2012 budget and in each fiscal year thereafter, the General Manager will submit to the Board at least a three year financial forecast of anticipated revenues and expenses.

#### **4. Debt Management**

- a. ASA may issue long-term debt per the guidelines in this financial policy. Long-term borrowing will not be used to finance current operations. Long-term debt will be structured such that the term of financial obligations will not exceed the aggregate expected useful lives of the assets financed.
- b. Short-term borrowing may be utilized for the temporary funding of operational cash flow deficits or interim construction requirements.
- c. Permitted Debt by Type: ASA may issue the debt instruments described below. The most appropriate instrument for a proposed sale of debt shall be determined by financing needs and expected market conditions at the time of sale.
  - i. Lease Financing – ASA may use lease financing for equipment if (i) it can be demonstrated that this is the most cost effective or appropriate way to secure financing, or (ii) on projects that do not warrant entry into the bond market.
  - ii. Bond Anticipation Notes (BANs) - which include Commercial Paper, are typically an interim means of financing and, by their very nature, expose ASA to interest rate risk upon renewal. BANS may be used to (i) to finance projects until such time as the project or projects can be incorporated into a long-term bond sale, (ii) during times of high interest rates and when the expectation is that interest rates will stabilize in the future or trending downward, (iii) when market conditions are such that a BAN may be more readily received in the market than long-term debt, or (iv) on an interim basis during the construction period for a project until such time as the project is placed into service.
  - iii. Long-Term Revenue Bonds - ASA may issue long-term revenue bonds to fund capital projects. These bonds may be issued by ASA in a number of ways, including, but not limited to, those listed below.

ASA will evaluate multiple methods for issuing long-term revenue bonds and use the method that is most advantageous to ASA.

1. ASA may issue the bonds through a public sale under its own name in the capital markets.

2. ASA may issue the bonds through a private placement under its own name.

3. ASA may issue the bonds to the Virginia Resources Authority (VRA) under one of VRA's loan programs.

iv. Revenue Anticipation Notes (RANs) - may be issued to meet ASA's operational cash flow needs.

v. Lines of Credit - may be considered as an alternative to other short-term borrowing options.

d. Guidelines on Debt Issuance

i. Bond Indenture – ASA will abide by the covenants contained in the Bond Indenture. ASA considers these covenants to be minimum requirements, and generally expects to exceed the requirements of each covenant.

ii. Authorization – Prior to the issuance of debt, the Board will pass a resolution authorizing the financing arrangements and setting appropriate limits and parameters for the anticipated financing in accordance with applicable laws.

iii. Lowest Cost Financing – ASA intends to pursue the lowest cost of financing within the parameters of these financial policies, the Bond Indenture and ASA's enabling legislation.

iv. Method of Issuance – Prior to each debt issuance, ASA will evaluate the available methods of issuance and pursue the method of issuance that is most advantageous to ASA, whether a stand-alone issue by ASA or use of a third party financing approach such as Revolving Fund Loans or pooled borrowing programs available through the Virginia Resources Authority (VRA). Some considerations for evaluating the method of issuance, particularly when determining whether to issue debt through VRA or under ASA's name, include:

1. Financing Cost. This analysis should evaluate the overall cost of the financing, including borrowing rates, upfront fees (such as the cost of obtaining a credit rating), whether a Debt Service Reserve Fund is required, ongoing costs and any other costs of the financing.

2. Permitted Uses of Funds. Some project costs are not eligible to be funded through certain financing programs. For example, land purchase costs are not eligible to be funded through the Department of Environmental Quality's Revolving Loan Fund program that ASA has used in the past.

3. Structural Flexibility. When selecting a financing program, ASA will consider the flexibility of debt features available under each program. For example, ASA will consider how flexible repayment features, call provisions, and borrowing terms are under each program.

v. Project Costs Prior to Debt Issue – If project costs are incurred prior to the issuance of debt, the Board will pass a resolution documenting its intent to be reimbursed from bond proceeds as appropriate.

vi. Variable Rate Debt (VRD) – VRD carries inherent interest rate risk.

Such securities historically have interest rates lower than long-term fixed rate securities and offer the potential for lower debt service costs over the term of the bond issue. ASA will consider using VRD when it: (i) Improves matching of assets and liabilities, (ii) potentially lowers debt service costs, (iii) adds flexibility to ASA's capital structure, or (iv) diversifies ASA's investor base.

1. Debt service on VRD will be budgeted at a conservative rate based on historical fluctuations in interest activity and current market assumptions. Before issuing VRD, ASA will determine how potential spikes in the debt service will be funded and consider the impact of various interest rate scenarios on its financial position and on various debt ratios.

2. ASA will not issue VRD in excess of 20 percent of its total debt portfolio. This limitation does not apply to other VRD which ASA has endeavored to offset with an operating investment portfolio intended to act as an economic hedge to interest rate fluctuations associated with the VRD. This limitation also excludes any VRD that may be hedged through an appropriate derivative agreement, if such technique is approved by the ASA Board.

**e. Method of Sale**

i. ASA will select a method of sale (competitive, negotiated, or private placement) it believes is the most appropriate in light of financial, market, transaction-specific and ASA-related conditions.

**f. Term of Debt**

i. ASA will not issue debt with a term or final maturity longer than the aggregate useful lives of the projects being financed. ASA does not expect to issue debt with a final maturity more than 40 years from the date of issuance. Factors to be considered when determining the final maturity of debt include: the average life of the assets being financed, relative level of interest rates, and the year-to-year differential in interest rates.

**g. Debt Structure**

i. Interest Rate Structure – ASA may use both variable and fixed rate debt in accordance with limitations set forth in this policy.

ii. Maturity Structure – ASA's long-term debt may include serial and term bonds. Other maturity structures may also be considered when demonstrated to be advantageous to ASA.

iii. Coupon Structure – Fixed rate debt may include par, discount, premium and capital appreciation bonds.

iv. Redemption Features – In order to preserve flexibility and refinancing opportunities, ASA debt shall generally be issued with call provisions. ASA may consider call provisions that are shorter than traditional and/or non-callable debt when warranted by market conditions and opportunities. For each transaction, various call option scenarios will be evaluated so that the most beneficial can be utilized.

v. Credit Enhancement – ASA may use bond insurance and/or line and letters of credit for credit enhancement when it is economically advantageous to do so.

vi. Debt Service Reserve Fund – ASA will fund a Debt Service Reserve Fund (DSRF) if required by the Bond Indenture.

vii. **Capitalized Interest** – By definition, capitalization of interest increases the amount of debt that is issued. ASA will capitalize interest for a period not longer than 12 months after the project being financed is expected to be placed in service.

viii. **Refinancing of Debt** – ASA will refinance debt from time to time to achieve debt service savings as market opportunities arise. Since federal regulations limit a tax-exempt issue to one advance refunding (a refinancing more than 90 days prior to a bond's call date), ASA will ensure that the advance refunding results in a significant present value savings. A proposed refinancing must achieve a minimum cumulative, net present value savings of 3 percent of the amount refinanced. An exception to this minimum refinancing savings policy will be if the refinancing is being done for debt restructuring purposes and the Board determines that it is in the best interests of ASA to complete the refinancing without achieving the refinancing savings policy. In addition, ASA will consider the efficiency of a proposed refinancing transaction. The efficiency evaluation will consider the value realized by ASA when exercising its option to redeem its bonds early calculated under a variety of different interest rate environments, versus the savings garnered. In general, ASA will consider refinancing bonds when the aggregate efficiency is equal to or greater than 70 percent.

ix. In any refinancing transaction, ASA maintains a bias to not extend maturities.

**h. Escrow Structuring**

i. ASA will utilize the least costly securities available in structuring refinancing escrows. Unless state and local government securities (SLGS) are used, a certificate will be provided by a third party agent stating that the securities were procured through an arms-length, competitive bid process (in the case of open market securities), and that the price paid for the securities was reasonable within federal guidelines.

ii. Under no circumstances will an underwriter, agent or financial advisor or ASA affiliates or affiliated accounts of an underwriter or financial advisor to ASA sell escrow securities to ASA from its own account.

i. **Hiring of Professionals** – All members of the financial advisory team including underwriter, financial advisor, bond counsel, and other professionals will be selected in a manner consistent with ASA's procurement policy for professional services.

**i. Underwriter Selection**

**1. Senior Manager Selection** – ASA will select a senior manager for any proposed negotiated sale. The selection criteria will include but not be limited to the following:

- a. The firm's ability and experience in managing transactions similar to that contemplated by ASA.
- b. Prior knowledge and experience with ASA.
- c. The firm's ability and willingness to risk capital and demonstration of the firm's capital availability and underwriting of unsold balances.
- d. Quality and experience of personnel assigned to ASA's engagement.

e. Financing plan presented.

f. Cost including underwriting fees and anticipated pricing.

2. Co-Manager Selection – Co-manager may be selected on the same bases as the senior manager with the exception of underwriting fees, which are determined by the senior manager. In addition to their qualifications, co-managers appointed to specific transactions will be a function of transaction size and the necessity to ensure maximum distribution of ASA's bonds.

3. Underwriter's Counsel – In any negotiated sale of ASA debt in which legal counsel is required to represent the underwriter, the appointment will be made by the Senior Manager with final approval from ASA.

4. Underwriter's Discount – ASA will evaluate the proposed underwriter's discount against comparable issues in the market. If there are multiple underwriters in the transaction, ASA will determine the allocation of underwriting liability and management fees. The allocation of fees will be determined prior to the sale date. A cap on management fees, expenses and underwriter's counsel fee will be established and communicated to all parties by ASA. The senior manager shall submit an itemized list of expenses.

5. Evaluation of Underwriter Performance – ASA will evaluate each bond sale after completion to assess the following: costs of issuance including underwriters' compensation, pricing of the bonds in terms of the overall interest cost and on a maturity-by-maturity basis, and the distribution of bonds.

6. Syndicate Policies – For each negotiated transaction, ASA will establish syndicate policies that will describe the priority of orders and designation policies governing the upcoming sale.

ASA shall require the senior manager to:

a. Fairly allocate bonds to other managers and the selling group.

b. Comply with the Municipal Securities Rulemaking Board's (MRSB) regulations governing the priority of orders and allocations.

c. Within 10 working days after the sale date, submit to ASA a detail of orders, allocations and other relevant information pertaining to ASA's sale.

## ii. Consultants

1. Financial Advisor – ASA will select a financial advisor to assist in its debt issuance and debt administration processes.

Selection of the ASA's financial advisor will be based on, but not limited to, the following criteria:

a. Experience in providing consulting services to entities similar to ASA.

b. Knowledge and experience in structuring and analyzing bond issues.

c. Experience and reputation of assigned personnel.

d. Fees and expenses.

2. Bond Counsel – ASA will include a written opinion by legal counsel affirming that ASA is authorized to issue the proposed debt, that ASA has met all legal requirements necessary for issuance, and a determination of the proposed debt's federal income tax status. The approving opinion and other documents relating to the issuance of debt will be prepared by counsel with extensive experience in public finance and tax issues. The Bond Counsel will be selected by ASA.

3. Conflicts of Interest – ASA requires that its consultants and advisors provide objective advice and analysis, maintain the confidentiality of ASA financial plans, and be free from any conflict of interest that has not been fully disclosed to, and waived by, ASA. In no case will ASA's financial advisor be permitted to underwrite any portion of ASA's bond issues, whether sold competitively or negotiated.

4. Disclosure by Financing Team Members – All financing team members will be required to provide full and complete disclosure, relative to agreements with other financing team members and outside parties. The extent of disclosure may vary depending on the nature of the transaction. However, in general terms, no agreements will be permitted which could compromise the firm's ability to provide independent advice which is solely in ASA's best interests or which could reasonably be perceived as a conflict of interest.

**j. Communication and Disclosure**

i. Continuing Disclosure – ASA recognizes that accurate and complete disclosure is imperative. ASA will comply with all state and federal disclosure obligations and will meet its disclosure requirements in a timely and thorough manner.

**k. Arbitrage Compliance**

i. ASA will maintain a system of record keeping and reporting in order to comply with the Arbitrage Rebate Compliance Requirements of the Internal Revenue Code of 1986, as amended.

**5. Derivatives**

a. Derivatives such as interest rate swaps and options are financial tools that can help ASA meet important financial objectives, however they introduce multiple risks which must be understood and managed. Properly used, these instruments may increase ASA's financial flexibility, provide opportunities for interest rate savings or enhanced investment yields, and help ASA manage its balance sheet through matching of assets and liabilities.

b. ASA will not enter into any financial derivative or swap until the following have occurred:

i. The Board has adopted a comprehensive derivatives/swaps policy outlining the following related to the use of derivatives/swaps:

**1. Approach and Objectives**

a. Specific objectives for utilizing swaps

b. Prohibited swap features

**2. Legal Authority**

**3. Permitted Instruments**

**4. Procedure for Submission and Execution**

- 5. Swap Analysis and Participant Requirements**
    - a. Swap risks
    - b. Counterparty risk assessment
    - c. Benefit expectation
  - 6. Legal and Contractual Requirements**
    - a. Legal terms of swaps
    - b. Notional amount
    - c. Final maturity
    - d. Termination provisions
    - e. Collateral
  - 7. Ongoing Management**
  - 8. Ongoing Reporting Requirements**
  - 9. Acceptable Collateral**
- ii. The Board has approved the execution of the specific financial derivative or swap transaction.**

## **Appendix A – Definitions**

**Bond Anticipation Note (BANs):** Notes which are paid from the proceeds of the issuance of long-term bonds. Typically issued for capital projects.

**Call Provisions:** The terms of the bond giving the issuer the right to redeem all or a portion of a bond prior to its stated date of maturity at a specific price, usually at or above par.

**Capital Improvement Program (CIP):** Plan for major non-recurring facility, infrastructure, or acquisition expenditures that expand or improve the system and/or community assets. Projects included in the CIP include physical descriptions, implementation schedules, year of expenditure cost and funding source estimates, and an indication of priorities and community benefits.

**Capitalized Interest:** A portion of the proceeds of a bond issue which is set aside to pay interest on the same bond issue for a specific period of time. Interest is commonly capitalized for the construction period of the project.

**Commercial Paper:** Short-term, unsecured promissory notes issued by corporations to finance receivables for a maturity specified by the purchaser that ranges from three days to 270 days. Notes are generally sold at a discount, and carry credit ratings issued by an NRSRO.

**Competitive Sale:** A sale/auction of securities by an issuer in which underwriters or syndicates of underwriters submit sealed bids to purchase the securities. Contrast to a negotiated sale.

**Continuing Disclosure:** The principle that accurate and complete information material to the transaction which potential investors would be likely to consider material in making investment decisions with respect to the securities be made available on an ongoing basis.

**Credit Enhancement:** Credit support purchased by the issuer to raise the credit rating of a debt issue. The most common credit enhancements consist of bond insurance, direct or standby letters of credit, and lines of credit.

**Debt Service Reserve Fund:** The fund in which moneys are placed which may be used to pay debt service if pledged revenues are insufficient to satisfy the debt service requirements.

**Derivatives:** A financial product whose value is derived from some underlying asset value.

**Designation Policies:** Outline how an investor's order is filled when a maturity is oversubscribed when there is an underwriting syndicate. The senior managing underwriter and issuer decide how the bonds will be allocated among the syndicate. There are three primary classifications of orders which form the designation policy: Group Net Orders; Net Designated orders and Member orders.

**Escrow:** A fund established to hold moneys pledged and to be used to pay debt service on an outstanding issue.

**Expenses:** Compensates senior managers for out-of-pocket expenses including:

underwriters counsel; DTC charges, travel, syndicate expenses, dealer fees, overtime expenses, communication expenses, computer time and postage.

**Letters of Credit:** A bank credit facility wherein the bank agrees to lend a specified amount of funds for a limited term.

**LIBOR:** The London InterBank Offered Rate is the rate on U.S. dollar denominated deposits with maturities from 1 day to 12 months transacted between banks in London. LIBOR is the benchmark swap floating index in the taxable or corporate swap market.

**Liquidity:** The ability of ease with which an asset can be converted into cash without a substantial loss of value.

**Management Fee:** The fixed percentage of the gross spread which is paid to the managing underwriter for the structuring phase of a transaction.

**Maturity:** The date upon which the principal or stated value of an investment becomes due and payable.

**Members:** Underwriters in a syndicate other than the senior underwriter.

**Nationally Recognized Statistical Rating Organization (NRSRO):** A credit rating agency which issues credit ratings that the U.S. Securities and Exchange Commission (*the "SEC"*) permits other financial firms to use for certain regulatory purposes. Examples include Moody's Investor Service, Standard & Poor's and Fitch Ratings.

**Negotiated Sale:** A method of sale in which the issuer chooses an underwriter to negotiate terms pursuant to which such underwriter will purchase and market the bonds.

**Original Issue Discount:** The amount by which the original par amount of an issue exceeds its public offering price at the time it is originally offered to an investor.

**Portfolio:** Collection of securities held by an investor.

**Present Value:** The current value of a future cash flow.

**Private Placement:** The original placement of an issue with one or more investors versus being publicly offered or sold.

**Revenue Bonds:** Bonds secured by a specific revenue pledge of rates, rents or fees.

**Securities and Exchange Commission ("SEC"):** Agency created by Congress to protect investors in securities transactions by administering securities legislation.

**Selling Groups:** The group of securities dealers who participate in an offering not as underwriters but rather who receive securities less the selling concession from the managing underwriter for distribution at the public offering price.

**SIFMA:** The Securities Industry and Financial Markets Association is a high grade market index of 7-day variable rate demand notes that is produced by Municipal Market Data.

SIFMA is the benchmark swap floating index in the tax-exempt swap market.

**Syndicate Policies:** The contractual obligations placed on the underwriting group relating to distribution, price limitations and market transactions.

**Underwriter:** A dealer that purchases new issues of municipal securities from the Issuer and resells them to investors.

**Underwriter's Discount:** The difference between the price at which bonds are bought by the Underwriter from the Issuer and the price at which they are offered to investors, representing the compensation earned by the Underwriter for placing the bonds with investors.
